## INDUCTIVE AND DEDUCTIVE

AN INTRODUCTION TO SCIENTIFIC METHOD

BY

ADAM LEROY JONES, Ph. D.

ADJUNCT PROFESSOR OF PHILOSOPHY  
IN COLUMBIA UNIVERSITY

NEW YORK  
HENRY HOLT AND COMPANY

## PREFACE

THIS book is intended as a text-book and not at all as a contribution to logical theory. It aims to present an outline of scientific method as briefly and as concretely as possible. It is not designed to serve as an introduction to general philosophy. Its chief claim to novelty is in the arrangement of the subject matter. The traditional arrangement in which the deductive processes are presented first usually leaves with the student the impression that method is chiefly deduction, and that there is no very close connection between this and the rest of subject. The arrangement, which is here adopted, was selected on pedagogical grounds and not in the interests of any epistemological theory.

The justification for dogmatic statements on disputed points is also pedagogical. Argument on such points in a text-book usually fails to interest the student and often tends to make him think that the whole subject is in an uncertain state and mostly a matter of opinion. Some subjects are treated much more briefly than they deserve, but I wished to keep them in due proportion with the rest.

Fallacies are first discussed along with the processes with which they are connected, but they are all brought together in a later chapter. Many of the exercises are new, but I have also drawn freely from other text-books. The longer exercises at the end of the book give the student an opportunity to bring to bear al-

most the whole of scientific method, and for this reason they seem to me to be very important.

My indebtedness to Jevons, Hyslop, Mill, and Bowley will be obvious. I owe much to Aikins' *Principles of Logic*; his broader treatment of many topics and his chapters on Testimony, Averages, Statistics, etc., were very suggestive. Sidgwick's *The Use of Words in Reasoning*, Creighton's treatment of the Figures of the Syllogism in his *Introduction to Logic*, Hibben's use of the idea of system in his *Logic* and Cramer's *The Method of Darwin*, were also suggestive. I have tried to give credit in each case in which I am conscious of having borrowed.

I am much indebted to three of my former colleagues in Princeton University: to Professor W. T. Marvin for going over the whole of the copy and giving me much useful advice, and to Professors W. H. Sheldon and E. M. Rankin for assistance with the proof; and to my colleagues, Professors Woodbridge and Montague, for many valuable discussions of logical problems.

A. L. J.

NEW YORK, *April*, 1909.

# CONTENTS

## PART I

### *AN OUTLINE OF SCIENTIFIC METHOD*

#### CHAPTER I

##### INTRODUCTORY

	PAGE
Science and Common Sense—Induction and Deduction included in Scientific Method—The Beginning of knowledge—Natural Sciences and others—The Sources of Knowledge, Direct and Indirect—Organizing knowledge—Classification as a preliminary step—Language as a necessary instrument—Further steps in organized knowledge—What is presupposed? . . . . .	1

#### CHAPTER II

##### FIRST STAGES IN KNOWLEDGE

Facts and the ways in which they are known—Perception and what it includes—Indirect means to knowledge of facts' . . . . .	13
--	----

#### CHAPTER III

##### CLASSIFICATION

Types of Classification—Division—Requirements of Classification . . . . .	32
---	----

#### CHAPTER IV

##### THE USE AND MISUSE OF WORDS

Discrimination, Conception, Abstraction—Necessity for Language—Terms—Kinds of Terms—Definition—Defects of Definitions . . . . .	45
---	----

## CHAPTER V

## PROPOSITIONS

- Kinds of Propositions—Propositions and Terms—The Relation of Subject and Predicate—The Distribution of Terms in a proposition—Euler's Method—Ambiguous Propositions . . . . . 66

## CHAPTER VI

## INDUCTION

- Generalization and what it includes—Causal Connection—Testing Inductive inferences—Complete Enumeration—How Generalizations are verified—Observation and Analysis are pre-supposed—Postponing inference till test conditions are present—The Inductive Methods. . . . . 79

## CHAPTER VII

## VERIFICATION AND DEDUCTION

- Verification and Deduction—Systematic Knowledge—How propositions are related to each other—Relations of Opposition among propositions which have not identical terms—Conversion—Obversion—Contraposition . . . . . 110

## CHAPTER VIII

## THE SYLLOGISM

- The Principles of Syllogistic Reasoning—The First Figure and its Principles—The Second Figure—The Third Figure—The Fourth Figure . . . . . 126

## CHAPTER IX

## TRADITIONAL TREATMENT OF THE SYLLOGISM

- Traditional treatment—Moods—Figures—Note on the Reduction of the Moods and Figures . . . . . 137

## CHAPTER X

## ABBREVIATED AND COMPLEX FORMS OF REASONING—HYPOTHETICAL AND DISJUNCTIVE SYLLOGISMS

- The Enthymeme—Prosyllogism and Episylogism—The Sorites—Hypothetical Reasoning—Disjunctive Reasoning—More Complex Forms—Extra-syllogistic Reasoning . . . . . 151

## CONTENTS

ix

### CHAPTER XI

PAGE

I. PROOF AND DISPROOF	II. FAILURE TO PROVE
Various Kinds of Proof—Failures to Prove—Fallacies . . .	166
GENERAL EXERCISES . . . . .	177

## PART II

### *SUPPLEMENTARY METHODS*

#### CHAPTER I

##### STATISTICS

Statistics, their uses and limits—Correlation—The Processes used in Statistical Investigations . . . . .	189
--	-----

#### CHAPTER II

##### AVERAGES

The Arithmetical Average—The "Weighted" Average—The Mode—The Median—The Geometrical Average—Measuring Deviations from an average—Measurement of phenomena—The Comparison of quantities which cannot be measured . . . . .	198
---	-----

#### CHAPTER III

##### PROBABILITY

The Meaning of Probability—Deducing the probability of a phenomenon—Dangers to be avoided in interpreting probability . . . . .	213
---	-----

#### SUPPLEMENT TO PART II

The Graphic Method of Representing Data and Their Relations . . . . .	226
---	-----

## PART III

### *THE CONSTRUCTION OF SYSTEMS*

#### CHAPTER I

##### EXPLANATION

What is Explanation? . . . . .	237
--------------------------------	-----

CHAPTER II  
HYPOTHESIS

- What is an Hypothesis?—The Value of Hypotheses—How are Hypotheses suggested to us?—Requisites of a good hypothesis . . . . . 246

CHAPTER III

TYPICAL SYSTEMS OF KNOWLEDGE

- The Geometric System—Others closely related to this—Systems which are more concerned with concrete phenomena—Systems of Historical Facts . . . . . 257

EXERCISES IN THE EXAMINATION OF COMPLEX REASONING

- Professor James's Argument for his Theory of the Emotions—A. H. Fison on "The Evolution of Double Stars"—Huxley on "The Demonstrative Evidence of Evolution" 279
