**ELEMENTARY TREATISE
ON THE
DIFFERENTIAL AND
INTEGRAL CALCULUS**

AN ELEMENTARY TREATISE ON THE
DIFFERENTIAL AND INTEGRAL CALCULUS.

Cambridge :

Printed at the University Press.

FOR MACMILLAN AND CO.

London: GEORGE BELL.

Dublin: HODGES AND SMITH.

Edinburgh: EDMONSTON AND DOUGLAS.

Glasgow: JAMES MACLEHOSE.

Orford: J. H. PARKER.

AN ELEMENTARY TREATISE ON
THE DIFFERENTIAL AND
INTEGRAL CALCULUS,

FOR THE USE OF COLLEGES AND SCHOOLS.

BY G. W. HEMMING, M.A.,

FELLOW OF ST. JOHN'S COLLEGE, CAMBRIDGE.

SECOND EDITION,
WITH CORRECTIONS AND ADDITIONS.

Cambridge:
MACMILLAN & CO.
1852.

PREFACE TO THE SECOND EDITION.

MANY corrections and additions have been made in the present Edition, chiefly with the view of fitting it for younger students by bringing out the leading principles of the subject with greater clearness. Some additional illustrative examples are given, but for purposes of practice the student is still referred to Gregory's Collection of Examples.

Lately Published, by the same Author, 12mo. cloth, 4s. 6d.

FIRST BOOK ON PLANE TRIGONOMETRY, comprising Geometrical Trigonometry, and its Application to Surveying, with numerous Examples for the use of Schools.

CONTENTS.

CHAPTER I.

Variables and Functions.

Article		Page
1—7.	Definitions of variables and functions	1
8.	Equations of one or more independent variables	7

CHAPTER II.

Limiting Values of Functions.

9.	Definition and explanation of a limiting value	8
10.	Axioms respecting limiting values	11
11.	$\lim_{PQ \rightarrow 0} \frac{\text{arc } PQ}{\text{chord } PQ} = 1$	11
12.	$\lim_{x \rightarrow 0} \frac{\sin x}{x} = 1$	12
13.	$\lim_{x \rightarrow 0} \frac{x^n - 1}{x - 1} = n$	12
14.	$\lim_{x \rightarrow 0} (1 + x)^{\frac{1}{x}} = e$	13
15.	$\lim_{x \rightarrow 0} \frac{\log(1 + x)}{x} = \frac{1}{\log a}$	13
16.	$\lim_{x \rightarrow 0} \frac{a^x - 1}{x} = \log a$	14

CHAPTER III.

Differentiation.

17.	Definition of differentials and differential coefficients	15
18.	Differentials proportional to the rates of increase of the variables	17
19.	Geometrical illustration of the definition	17
20—44.	Differentiation of elementary functions	19
45—51.	Differentiation of a function of a function	27
52.	Examples	30
53.	Summary of results	31

CHAPTER IV.

Integration.

Article		Page
54.	Definition of integration	34
56, 57.	Addition of a constant in integration	35
58—65.	Integration of elementary functions	36
66.	Summary of results	40
67.	Integration by algebraical transformations	41
68, 69.	Integration by parts	42
70—76.	Integration of rational fractions	43
78.	Rationalization	49
79, 80.	Criteria of integrability of $x^n (a + bx^r)^p dx$	49
81—87.	Integration by reduction	51
88.	Exceptional cases	56
89.	Integration of $\sin^m x \cos^n x dx$ in particular cases	57
90, 91.	Integration of the same function by reduction	57

CHAPTER V.

Successive Differentiation.

92.	Definition of an independent variable	60
93.	Geometrical illustration	61
94, 95.	Successive differentiation	62
96—98.	Relations between successive differentials and differential coefficients, when the independent variable is general	63
99.	Form of the above relations when the quantity (x), under the functional sign, is independent variable	64
100.	Examples	65
101—104.	Formation of differential equations	67
105.	Homogeneity of differential equations	70
106.	Change of independent variable	70
107.	To pass from an equation among differentials, with x as independent variable, to one among differential coefficients with respect to x , and the converse	70
108, 109.	To pass from a general independent variable to x , and the converse	71
110.	To pass from a general independent variable to any function of x	71
111—113.	To change the independent variable from x to any function of x	72
114.	To change the independent variable from x to y	74
115, 116.	Illustrations and examples	74

CHAPTER VI.

Differentiation of Functions of several Variables and Implicit Functions.

117, 118.	The total differential of a function of two connected variables equal to the sum of the partial differentials	78
-----------	---	----

Article		Page
119—121.	Examples	80
122.	Extension to functions of any number of variables	82
123—125.	Implicit functions of one independent variable	82
126—128.	Relations between corresponding implicit and explicit functions	84
129.	Examples	86
130—132.	Definition of the total differential of a function of two independent variables	87
133, 134.	Another form of the definition	92
135.	Geometrical illustration	94
136.	Successive total and partial differentiation	95
137.	Order of successive partial differentiation immaterial	96
138.	Notation for successive differentials and differential coefficients	97
139—142.	Relations between successive total and partial differentials and differential coefficients, with general independent variables	99
143.	The same relations, with particular independent variables	101
144—146.	Change of independent variable in equations involving partial differential coefficients	101

CHAPTER VII.

Development of Functions.

147—149.	Taylor's theorem. Limits of the remainder. Examples	104
150, 151.	Stirling's theorem. Examples	107
152, 153.	Failure of Taylor's theorem	108
154.	Other methods of expansion	110
155.	Extension of Taylor's theorem to functions of two variables	111
156.	$\frac{d^2 f(x, y)}{dx^2 dy} = \frac{d^2 f(x, y)}{dy dx^2}$	112
157.	Limits of remainder of the above series	112
158, 159.	Other forms of Taylor's theorem	113
160.	Lagrange's theorem	113
161.	Laplace's theorem	115
162.	Laplace's theorem deduced from Lagrange's	116

CHAPTER VIII.

Limiting values of Indeterminate Functions. Maxima and Minima values of Functions.

163.	Fractions of the form $\frac{0}{0}$	117
164, 165.	Fractions of the form $\frac{\infty}{\infty}$	117
166.	Other indeterminate forms	119
167—171.	Maxima and Minima of Functions of one independent variable. Geometrical illustration	119
172—177.	Maxima and Minima of Functions of two or more independent variables. Geometrical illustration	123
178.	Examples	129
