DIONYSIUS LARDNER & BENJAMIN F. JOSLIN

**A TREATISE ON
HYDROSTATICS
AND PNEUMATICS**

THE
CABINET
OF
NATURAL PHILOSOPHY.

CONDUCTED BY THE
REV. DIONYSIUS LARDNER, LL.D. F.R.S. L. & E.
M.R.I.A. F.R.A.S. F.L.S. F.Z.S. Hon. F.C.P.S. &c. &c.

ASSISTED BY
EMINENT SCIENTIFIC MEN.

HYDROSTATICS
AND
PNEUMATICS.

BY
THE REV. DIONYSIUS LARDNER.
WITH NOTES
BY
THE AMERICAN EDITOR.

PHILADELPHIA:
CAREY AND LEA—CHESTNUT STREET.

1832.

A
TREATISE
OF
HYDROSTATICS
AND
PNEUMATICS.

BY THE
REV. DIONYSIUS LARDNER, LL.D. F.R.S.

First American, from the First London Edition.

WITH NOTES,

BY
BENJAMIN F. JOSLIN, M. D.

PROFESSOR OF NATURAL PHILOSOPHY IN UNION COLLEGE.

PHILADELPHIA:
CAREY AND LEA—CHESTNUT STREET.

1832.

Phys 1600.3.2

Henrietta C. Harris

CONTENTS.

HYDROSTATICS.

CHAP. I

INTRODUCTION.

Division of the physical Forms of Matter.—The solid and liquid States.—Cohesion.—Repulsion.—Heat.—Subject of Hydrostatics. Page 1

CHAP. II

PRESSURE OF LIQUIDS.

Pressure transmitted equally in all Directions.—Experimental Proof of this.—A Liquid is a Machine.—Hydrostatic Paradox.—Bramah's Hydrostatic Press.—Hydrostatic Bellows.—Various useful Applications of this Property.—Means of transmitting Signals.—Dr. Arnott's Suggestion of its Application in surgical Cases.—Illustrations from the Animal Economy.—Circulation of the Blood. 3

CHAP. III

OF THE PRESSURE PRODUCED BY THE WEIGHT OF A LIQUID.

Pressure proportional to the Depth.—Pressure on the horizontal Bottom and perpendicular Sides of a Vessel.—Experimental Proofs of the Property.—Total Pressure on the perpendicular Sides of a Vessel computed.—Embankments, Dams, and Floodgates.—Method of computing the total Pressure on the Surface of a Vessel of any Shape.—Examples.—Globe.—Cube.—Various Effects produced by the Pressure of Liquids at great Depths.—Cork forced into a Bottle.—Water forced into the Pores of Wood.—Liquids not absolutely incompressible.—Experiment to prove this. 17

CHAP. IV.

LIQUIDS MAINTAIN THEIR LEVEL.

Experimental Proof.—Vessels connected with communicating Tube.—Several Vessels between which there is a free Communication.—Hydrostatic Paradox explained by this Principle.—Surface of a Liquid level.—Why the Quality does not extend to Solids.—Surface of the Lead.—Surface of the Sea.—Curious optical Deception in Waves.—Similar Property in revolving Screw.—Ornamental Fountain Clocks.—Phenomena of Rivers, Springs, Wells, Cataracts, explained.—Canals, Locks.—Method of supplying Water to Towns.—Exact Sense of the word Level.—Common Surface of two Liquids in the same Vessel.—Leveling Instruments.—Spirit Level. 37

CHAP. V.

OF THE IMMERSION OF SOLIDS IN LIQUIDS

To determine the exact Magnitude of an Irregular Solid.—When soluble in the Liquid.—When porous.—Effect on the apparent Weight of the Liquid.—Effect on the apparent Weight of the Solid.—The real Weight of the Solid and Liquid not changed by Immersion.—Cause of the apparent Change.—When a Body is suspended.—Floating Bodies.—These Properties deduced from the fundamental Principles of Hydrostatics.—The same Solid sinks in some Liquids and rises in others.—Buoyancy.—Its Effects in submarine Operations.—Its Effects perceivable in Bathing.—Boats may be formed of any Material, however heavy.—An Iron Boat which cannot sink.—Method of preventing Ships from foundering.—Effects of the Cargo.—Ball Cock, and other floating Regulators.—Means of raising Weights from the Bottom of the Sea.—Method of lifting Vessels over Shoals.—Life Preservers.—Swimming.—Water Fowl.—Fish.—Why a drowned Body floats.—Philosophical Toy.—Why Ice Sinks.—Rocks raised to the Surface by Ice. 58

CHAP. VI.

OF DIFFERENT LIQUIDS IN COMMUNICATING VESSELS.

Lighter Liquids float to the Top.—Oil, Water, and Mercury.—Cream of Milk.—Ingredients of the Blood.—Oil and Spirits.—Proof Spirits.—Water and Wine.—Water in the Depths of a frozen Sea less cold than at the Surface.—A Liquid may boil at the Surface, while the lower Parts are cold.—Method of applying Heat to boil a Liquid.—Method of applying Ice to cool Wine.—Different Liquids in a bent Tube.—Method of raising Water by impregnating it with Air. . . 83

CHAP. VII.

EQUILIBRIUM OF FLOATING BODIES.

Conditions of Equilibrium.—Cases of Stable, Instable, and Neutral Equilibrium.—Experimental Proof.—Feet of walking on the Water.—Life Preserver.—Stability of Ships.—Position of Cargo.—Ballast.—Danger of standing up in a Boat.—Leakage of a sailing Vessel.—How avoided in Steam Vessels. 91

CHAP. VIII.

SPECIFIC GRAVITIES.

Different Senses of the Terms Heavy and Light.—Weight absolute and relative.—Specific Gravity.—Standard of Comparison for Solids and Liquids.—For Gases.—Density.—The Immersion of Solids in Liquids gives their Specific Gravities.—Methods of ascertaining Specific Gravities.—Hydrostatic Balance.—Sikes's Hydrometer.—Nicholson's Hydrometer.—De Parcieux's Hydrometer.—Method of determining the Constituent Parts of Compound Bodies.—Alloys of Metal.—Spirits.—Adulteration of Milk and other domestic Liquids.—Hisco's Crown.—Penetration of Dimensions. 109

CONTENTS.

vii

CHAP. IX.

HYDRAULICS.

Velocity of Efflux from an Aperture in a Vessel.—Proportional to the Depth of the Aperture.—Equal to the Velocity acquired in falling through that Depth.—Effect of atmospheric Resistance.—Vena Contracta.—Rate at which the Level of the Water in the Vessel falls.—Lateral Communication of Motion by a Liquid.—River flowing through a Lake.—Currents and Eddies.—Effects of the Shape of the Bed and Banks of a River.—Force of a Liquid striking a Solid, or vice versa.—Effect of an Oar.—Wings of a Bird.—Direction of the resisting Surface.—Effect of the Velocity of the striking Body.—Solid of least Resistance.—Shape of Fishes and Birds.—Speed of Boats and Ships limited.—Comparative Advantages of Railroads and Canals. 130

CHAP. X.

OF HYDRAULIC MACHINES.

Water Wheels.—Overshot.—Undershot.—Roast.—Barker's Mill.—Archimedes' Screw.—Eluice Governor.—Chain Pump. 150

PNEUMATICS

CHAP. I.

INTRODUCTION.

Form of Bodies.—How affected by Heat.—Aeriform State.—Elasticity.—Division of mechanical Science.—Compressibility and Incompressibility.—Permanently elastic Fluids.—Vapor.—Steam.—Atmospheric Air. 160

CHAP. II.

PROPERTIES OF ATMOSPHERIC AIR.

Atmospheric Air is material.—Its Color.—Cause of the blue Sky.—Cause of the green Sea.—Air has Weight.—Experimental Proof.—Air has Inertia.—Examples of its Resistance.—It acquires moving Force.—Examples of its Impact.—Air is impenetrable.—Experimental Proof. 174

CHAP. III.

ELASTICITY OF AIR.

Elastic and compressing Forces equal.—Limited Height of the Atmosphere.—Elasticity proportional to the Density.—Experimental Proof.—Internal and external Pressure on close Vessels containing Air. 181

CHAP. IV.

WEIGHT OF AIR.

Mazim of the Ancients.—Abhorrence of a Vacuum.—Suction.—Galileo's Investigations.—Torricelli discovers the atmospheric Pressure.—The Barometer.—Fascal's Experiment.—Requisites for a good Barometer.—Means of securing them.—Diagonal Barometer.—Wheel Barometer.—Vernier.—Uses of the Barometer.—Variation of atmospheric Pressure.—Weather Glass.—Rules in common Use absurd.—Correct Rules.—Measurement of Heights.—Pressure on Bodies.—Why not apparent.—Effect of a Leather Snoker.—How Plies adhere to Ceilings, and Fishes to Rocks.—Breathing.—Common Bellows.—Forge Bellows.—Vent-Peg.—Tox-Pot.—Kettle.—Jak-Bottles.—Pneumatic Trough.—Goggling Noise in decanting Wine. 189

CHAP. V

EXHAUSTION AND CONDENSATION OF AIR.

Exhausting Syringe.—Rate of Exhaustion.—Impossible to produce a perfect Vacuum.—Mechanical Defects.—The Air Pump.—Barometer Gauge.—Siphon Gauge.—Various Forms of Air Pump.—Pump without Suction Valve.—Experiments with Air Pump.—Bladder burst by atmospheric Pressure.—Bladder burst by Elasticity of Air.—Dried Fruit inflated by fixed Air.—Flaccid Bladder swells by Expansion.—Water raised by elastic Force.—A Pump cannot act in the Absence of atmospheric Pressure.—Suction ceases when this Pressure is removed.—The Magdeburg Hemisphere.—Guinea and Feather Experiment.—Cupping.—Effervescing Liquors.—Sparkling of Champagne, &c.—Presence of Air necessary for the Transmission of Sound.—The Condensing Syringe.—The Condenser. 214

CHAP. VI.

MACHINES FOR RAISING WATER.

The Lifting Pump.—Pump without Friction.—The Suction Pump.—The Forcing Pump.—The same with Air Vessel.—The same with a solid Plunger.—Double Forcing Pump.—The Fire Engine.—Siphon.—The Wurttemberg Siphon. . . 239

CHAP. VII

THE AIR GUN, AIR BALLOON, AND DIVING BELL.

The Air Gun.—First Attempts at Balloons.—Lana's Balloon of rarefied Air.—Fire Balloons.—Montgolfier's Balloon.—First Ascent.—Balloons inflated with Hydrogen.—Parachute.—Blanchard's Experiment.—Causes of the Efficacy of the Parachute.—Ascent of Gay-Lussac and Biot.—Appearances in the higher Regions of the Atmosphere.—The Diving Bell. 257
