TABLE OF CONTENTS

I. Introduction	1
Brief description of the disease	1
History of the disease	
In Europe, 1881	1
In England, 1893	1
In Holland, 1903	2
In Canada, 1912	2
In the United States	2
Incomplete knowledge of the disease	2
II. The disease	3
Geographical distribution and economic importance ...	3
In England	4
In the United States	4
Hosts	5
Symptoms	6
Cooke's description	6
Mr. Güssow's description	6
Description on Narcissus	7
Early infection of iris	7
III. The causal organism	7
Taxonomy	7
Morphology	8
Description of mycelium	8
Description of conidiophores	9
Description of conidia	10

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that this is crucial for ensuring transparency and accountability in the organization's operations.

2. The second part of the document outlines the various methods and tools used to collect and analyze data. It highlights the need for consistent and reliable data collection processes to support informed decision-making.

3. The third part of the document focuses on the role of technology in data management and analysis. It discusses how modern software solutions can streamline data collection, storage, and reporting, thereby improving efficiency and accuracy.

4. The fourth part of the document addresses the challenges associated with data management, such as data quality, security, and privacy. It provides strategies to mitigate these risks and ensure that data is used responsibly and ethically.

5. The fifth part of the document concludes by summarizing the key findings and recommendations. It stresses the importance of ongoing monitoring and evaluation to ensure that data management practices remain effective and aligned with the organization's goals.

Table I. Measurements of conidia	11
Physiology	11
Cultural characters	11
Prune agar slants	12
Potato agar slants	12
Corn meal agar slants	12
Iris decoction agar slants	13
Nutrient agar slants	13
Melilotus stems	13
Cooked iris leaves	13
Relation of temperature to mycelium growth	14
Resistance to cold	
Conidia	14
Mycelium	15
Spore germination studies	16
In water	16
In prune decoction	17
In prune and water agar	17
Relation of temperature to spore germination	17
Table II	17
Pathogenicity	19
Isolation of organism	19
Inoculation experiments	20
Source of host plants	20
Methods of inoculation	21
Source of inoculum	21

Table III. Results of inoculation ex-	
periments	22
Reisolation of the fungus	24
Relation of moisture to infection	24
Rhizome inoculation	25
IV. Life history of the causal organism in relation to	
pathogenesis	26
Seasonal development of the disease	26
Sources of infection	26
Mode of entry of the organism and the subsequent	
development in host tissue	27
Methods used for killing and staining tissue	28
Vitality and longevity of conidia	29
Overwintering of the fungus	30
V. Control measures	
Suggestions for control	31
Measures being tested	32
Summary	33
