PREFACE.

THIS work on *Scientific Sewing and Garment Cutting* owes its publication to the constant and increasing demand for information in regard to the system which it explains. This demand has been created by the unqualified success of this form of manual training in the school where it has been taught, substantially as here set forth, for the past six years.

Since it is not a theory reduced to possible practice, but the exposition of a system that has been productive of the most excellent results, it is given to the public in the confident belief that it will serve a useful purpose.

PUBLISHERS' NOTE

It will be noted in connection with the diagrams presented in this book, that the authors have indicated lines by a single letter. This is for conciseness; and no confusion need arise if the general scheme of the parallelogram be borne in mind, which in every case has for its base line *A*, its left-hand side *B*, the upper line *C*, and the right-hand side *D*. In the more complex figures arrows are used to designate the direction of the lines.

The publishers are permitted to announce that worked models described in this book may be obtained by addressing Miss Louise M. Heller, 293 South Oakley Avenue, Chicago, Illinois.
