AMERICAN MANURES; AND FARMERS' AND PLANTERS' GUIDE

AMERICAN MANURES;

ANI

FARMERS' AND PLANTERS'

GUIDE.

COMPRISING

A DESCRIPTION OF THE ELEMENTS AND COMPOSITION OF PLANTS AND SOILS—THE THEORY AND PRACTICE OF COMPOSTING—THE VALUE OF STABLE MANURE AND WASTE PRODUCTS, ETC., ETC., ETC.

ALSO,

CHEMICAL ANALYSES OF THE PRINCIPAL MANUFACTURED FERTILIZERS—THEIR ASSUMED AND REAL VALUE— AND A FULL EXPOSE OF THE

FRAUDS PRACTISED UPON PURCHASERS.

B1

JAMES BENNETT QHYNOWETH,

LATE SUPERINTENDENT OF BACGH & SOR'S PERTILINER MANUFACTORIES, PHILADELPHIA

AND CHICAGO, AND

WILLIAM H. BRUCKNER, PH. D.,

PHILADELPHIA: CHYNOWETH & COMPANY, 1871.

HARVAND COLLEGE LIBRARY

1871. Selit. 27 1. 11. 16. Bruckuce Browne Frish

Entered according to Act of Congress, in the year 1871, by CHYNOWETH & COMPANY,

In the Office of the Librarian of Congress, at Washington, D. C.

PREFACE.

Knowledge is indispensably necessary to better the condition of mankind. The possession of the information that will enable us to procure what we need, is oftentimes more valuable than the possession of the same without such knowledge; the advantages of the latter are temporary, those of the former are permanent.

To be warned of danger is better than to be armed to resist it. When the wrongs and impositions practised on communities are fully exposed, they have no one to blame but themselves for their continuance. It has ever been considered the duty of each member of a community to do all in his power to expose and redress existing wrongs, especially when those wrongs affect the vital interests of all. From these considerations we feel it a duty, and we claim the right of giving freely the knowledge

we possess on the subjects treated in this book. We shall unmask practices that have been backed up by favorable reports, and artfully designed statements, falsely claiming to be benefits conferred on the community, and which, from a want of knowledge to distinguish real from imaginary good, have passed currently as such. We shall not attempt to disprove the statements of dishonest manufacturers of fertilizers by mere reasoning; we only desire the reader closely to scrutinize and compare the facts as given, and make his own deductions. We challenge the parties assailed to disprove them.

We expect to offend some: when wrongs are exposed, this is inevitable; and those parties may endeavor to refute the statements made. Our justification is written down in the following pages. In the language of Cicero, we shall "Neither dare to say anything that is false, nor fear to say anything that is true."

PHILADELPHIA,

May 1st, 1871.

CONTENTS.

CHAPTER I.

IMPORTANT PRELIMINARY OBSERVATIONS. (Page 11-31.)

11, Importance of our work.—12, Two kinds of works on farming.—13, 1st kind, and remarks.—14, 2d kind, and remarks.—15, Operations of the farm may be intelligently performed.—16, Farming may be made scientific—Book knowledge necessary.—17, Progress of other arts.—18, Terse sayings—Negligence and indifference of farmers.—19, Effect of knowledge —What we intend to show.—20, Effect of this upon farmers—Object of concentrated manures—Remark.—21, Analyses of Dr. Bruckner—How samples were obtained—Other fertilizers to be examined—Made manures a special study.—22, Secrecy and frauds of manufacturers.—24, Lying circulars.—25, Detection difficult—Immense profits.—26, Object of book.—27, Necessity of inspection.—28, Agricultural Department at Washington remiss.—29, All interested in agriculture.—30, Practical experiments to be made.

CHAPTER II.

ELEMENTS OF MANURES AND PLANTS. (Page 31-77.)

31, Definition of manure—Two objects to be effected—A perfect manure.—32, Loss of manures—Materials abundant.—38, Gaseous elements—Elements with oxygen forming acids—Bases—Alkalies—Elements unite in definite proportions.—34, Defini-

tion of element-A compound-An oxide-A salt-Chemical affinity.—35, Cohesion.—Gaseous Elements.—35, Oxygen—Its properties, etc.-One-fifth of the atmosphere-Half of animals and plants-Source of, in plants-Exhaled by plants.-37, Hydrogen-Its properties-How existing in nature-In plants and animals - Its weight - What it forms - How assimilated by plants,-38, Carburetted Hydrogen-Where found-Marsh gas-Fire damp-Present in soils.-39, Sulphuretted Hydrogen-How formed-Its properties-In marshy places-Hurtful to vegetation -Effects in soils.-41, Nitrogen-Its properties-Forms nitric acid with oxygen-Forms ammonia with hydrogen.-42, Plants do not absorb it from atmosphere.-43, Experiments of Lawes and others on rain water-Conclusion therefrom.-44, Chlorine -Its properties-Sources, etc.-45, ELEMENTS FORMING ACIDS -Silicon-Its appearance-Forms silicic acid-Silicates of potash, lime, and magnesia-Their use.-45, Silica-Crystallized and amorphous-Its properties.-46, Soluble silica-How formed, and uses of .- 47, Value of soluble silica-Sources of it .- 48, Carbon-Its properties.-48, Carbonic Acid-How formed.-49, Its uses to plants-Uses of humus or mould.-50, Phosphorus-Its properties, etc.-Phosphoric Acid-Its composition and properties -50, Bone Phosphate of Lime-Its composition, etc.-51, Neutral Phosphate of Lime-Its composition, etc.-51, Superphosphale of Lime-Its composition-How formed .- 52, Its action in soils, and Ronna's report on its action.-57, Sulphur-Its properties, etc.-58, Sulphuric Acid-Its composition and uses—Cheapest source to farmer.—Elements forming bases.— 58, Calcium-Its properties, etc .- 59, Oxide of Calcium, or quick lime-Its composition .-- 59, Carbonate of Lime-Its composition, etc .- How made quick lime, etc .- 59, Hydrate of Lime-Its composition .- 60, How lime should be slacked .- Maris rich in carbonate of lime—Quick lime more valuable than carbonate.—61, Neutralizes acids in soils-Liberates ammonia.-62, Effect on iron pyrites-On silicates of soda and potash-On salt-Its physical effects.-63, What soils need lime.-64, How and what quantity should be applied .- 65, Sulphate of Lime-Its composition-Attracts little moisture.-66, Its benefits due to sulphuric acid-Why but little required.—66, Magnesium—Its properties.—67, Magnesia—Its composition—Its action—Cheap sources of—Too much hurtful.-68, Iron-Forms two exides-Protexide injurious to vegetation.—69, Peroxide of Iron—Its composition—Uses in soils—Effect of too much—How to correct it, and effects.—70, Sulphate of Iron—How formed—Too much hurtful—How corrected—Iron pyrites useful.—70, Potassium—Its properties—Oxidizes readily—Forms caustic potash.—71, Potash—Its properties—Importance to plants—How and where found in nature.—72, Potash from plant and wood ashes—Wood ashes as manure.—73, Sodium—Its properties—Forms caustic soda—Soda now made from common salt.—74, Nitrate of Soda—Where found—Its uses in soils—Soda in plants—Cheapest source of it—Common Salt—Its composition.—75, Action of salt in soils—Injurious to some plants and trees—Exterminates insects and worms—How much wheat requires.

CHAPTER III.

COMPOSITION OF PLANTS, AND KINDS AND AMOUNT OF MANURES REQUIRED. (Page 77-104.)

77, Elements vary but little in plants of same kind-Effects, if not so-First lesson of farmers-Popular idea of action of manure. - 79, Potash, Silicon, and Lims Plants. - 80, Remarks on .- Importance of studying the tables.—82, Table of composition of plants .- 83, Albumen and Gluten-Their uses-Starch and Gum-Their uses and mode of action .- 84, Woody fibre-Of no use as food-Theory of fattening.-85, Table of inorganic elements of plants - A key to application of fertilizers - Remarks on table, -86, Composition of wheat and straw-Remarks-Ash of plants uniform .- 88, Crops on ordinary land .- 89, English farmers. -89, Wheat-Analysis of grain and straw-Remarks. -90, Indian Corn-Analysis of-Remarks.-91, Ryc-Analysis of-Remarks. - 92, Oats - Analysis of - Remarks. - 93, Barley -Analysis of-Remarks, -94, Buckwheat-Analysis of-Remarks. -94, Potatoes-Analysis of-Remarks.-95, Clover Hay-Analysis of-Remarks. -96, Tobacco and Cotton-Analysis of-Remarks.-98, What should be applied to each crop-Average crop in thirty States-In Pennsylvania-In South Carolina, -99, Remarks.-100, What reader should have learned.-101, What has been raised in four years-What was taken from the soil-What will restore it.-102, Bad effects of overcropping in United States and West Indies.
