THE Work now before the reader contains, in an abridged form, the First and Second Editions; the papers on Scalding, Chordee, and Gonorrhœa printed in the *Medical Times*; those on the treatment of Gonorrhœa published in the *Medical Circular*, and several papers read before the Medical Society of London and the North London and Western Medical Societies.

The sections on the Treatment of Inveterate Gleet with Blistering, and on Gonorrhœal Rheumatism, have been revised and amplified.

With the view of reducing the bulk of the work, many of the cases given in the first edition have been omitted, and those which are retained have been selected chiefly as examples absolutely necessary to show the power of certain remedies, or because they illustrate peculiar forms of the disorder which have been rather overlooked.

Whether the attempt now made to prove that all forms of Gonorrhœa, however complicated or inveterate, may be cured without the use of the so-called specifics, is based on sufficient grounds or not, is a point I must leave to others to decide. I can only say that it is made in good faith, and that, if I am deceived, others are deceived also, as the system I have sought to inculcate is certainly making converts.
