P R E F A C E.

THE object of these pages is to lay down and illustrate the more elementary principles of those Geometrical Methods which, in recent times, have been so successfully employed to investigate the properties of figured space.

The importance of the principles in question seems to render it advisable that the student should enter on their application at an early period of his progress ; and, in accordance with this view, examples in Plane and Spherical Geometry are here given in considerable numbers.

The scope and extent of the present work may be collected with tolerable accuracy from the Table of Contents ; but it is necessary to state, for the information of the reader, the amount of Mathematical knowledge which he is supposed to possess. The preliminary Propositions required for the perusal of the first five Chapters are to be found, with few exceptions, in the first six Books of Euclid's Elements. Some occasional deductions, involving the formulæ of Plane Trigonometry, are appended to these Chapters in the form of Notes. In the sixth Chapter the fundamental notions of Algebraic Geometry are referred to. The seventh, eighth, ninth, and tenth Chapters presuppose an acquaintance with the ordinary principles of Spherical Trigonometry ; and in the last two Chapters some of the properties of Curves of the second degree are assumed.

From this statement it will be gathered, that the work is in a great degree of a *supplementary* nature, and that the subjects embraced have some diversity of character. It has been attempted, however, to preserve throughout a certain unity of design, and a due connexion of the various parts.

Those who are acquainted with the writings of Poncelet and Chasles will readily appreciate the extent to which the author has borrowed from these distinguished geometers in the present publication. He is also indebted to the Additions contained in Professor Graves's Translation of Chasles's Memoirs of Cones and Spherical Conics; and on several occasions he has consulted with advantage Dr. Salmon's Treatise on Conic Sections. It is to be added, that many of the examples throughout the work, and of the questions in the Appendix, are taken from the Examination Papers of Trinity College, Dublin.

CONTENTS.

CHAPTER I.

HARMONIC PROPORTION AND HARMONIC PENCILS.

	PAGE
Harmonic Proportion	1
Examples on Harmonic Proportion	4
Harmonic Pencils	7
Transversals	8

CHAPTER II.

ANHARMONIC RATIO AND INVOLUTION.

Anharmonic Ratio	13
Examples on Anharmonic Ratio	15
Copolar Triangles	18
Anharmonic Properties of the Circle	19
Problems relating to Anharmonic Ratio	22
Hexagon inscribed in a Circle	24
Involution	26
Examples on Involution	29

CHAPTER III.

POLES AND POLARS IN RELATION TO A CIRCLE.

Poles and Polars	32
Polar Properties of Quadrilaterals	35
Method of Reciprocation	37
Problems relating to the Theory of Polars	44

CHAPTER IV.

THE RADICAL AXES AND CENTRES OF SIMILITUDE OF TWO CIRCLES.

The Radical Axis	51
The Radical Centre	57
Centres of Similitude	59
Axes of Similitude	64

CHAPTER V.

ADDITIONAL EXAMPLES ON THE SUBJECTS CONTAINED IN THE FIRST FOUR
CHAPTERS.

	PAGE
Additional Examples on Harmonic Proportion and Harmonic Pencils	66
Additional Examples on Transversals	69
Additional Examples on Anharmonic Ratio	75
Additional Examples on Involution	78
Additional Examples on the Theory of Polars	80
Additional Examples on Radical Axes and Centres of Similitude	90

CHAPTER VI.

THE PRINCIPLE OF CONTINUITY	96
---------------------------------------	----

CHAPTER VII.

ELEMENTARY PRINCIPLES OF PROJECTION.

Method of Projection	109
Examples on Projection	113
Projection of Angles	116

CHAPTER VIII.

SPHERICAL PENCILS AND SPHERICAL INVOLUTION.

Anharmonic Properties of Four Planes	117
Anharmonic Ratio on the Sphere	119
Harmonic Properties on the Sphere	121
Anharmonic Properties of a Lesser Circle	127
Spherical Involution	129

CHAPTER IX.

POLAR PROPERTIES OF CIRCLES ON THE SPHERE.

Polar Properties of Lesser Circles	133
Method of Reciprocation on the Sphere	140
Supplementary Figures	142
Examples on Spherical Reciprocation	145

CHAPTER X.

RADICAL AXES AND CENTRES OF SIMILITUDE ON THE SPHERE.

The Radical Axis on the Sphere	152
The Radical Centre on the Sphere	153
Centres of Similitude of Two Lesser Circles	151
Axes of Similitude on the Sphere	158

CHAPTER XI.

PROPERTIES OF THE SPHERE CONSIDERED IN RELATION TO SPACE.

	PAGE
Poles and Polar Planes	159
Reciprocal Surfaces	162
Stereographic Projection	165
Inverse Surfaces	167

CHAPTER XII.

PROPERTIES OF PLANE AND SPHERICAL SECTIONS OF A CONE.

Plane Sections of a Cone	170
The Spherical Ellipse	172
The Spherical Hyperbola	181
Projective Properties of Plane and Spherical Conics	182
Orthographic Projection	197

APPENDIX.

Questions on Elementary Plane Geometry	205
Questions relating to Circles on the Sphere	213
Miscellaneous Questions on the foregoing Subjects	217

INDEX	225

PRINCIPLES OF MODERN GEOMETRY.

CHAPTER I.

HARMONIC PROPORTION AND HARMONIC PENCILS.

ART. 1. THREE quantities are said to be in harmonic proportion, when the first is to the third as the difference between the first and second is to the difference between the second and third. Thus, 3, 4, 6, are in harmonic proportion.

It follows from this definition, that the three quantities will still be in harmonic proportion when their order is inverted, or when they are altered in the same ratio. Thus 6, 4, 3, are in harmonic proportion, and so also are $3m$, $4m$, $6m$, m being any number.

Three quantities are said to be in arithmetic proportion, when the difference of the first and second is equal to the difference of the second and third.

Three quantities are said to be in geometric proportion, when the first is to the second as the second to the third; that is, when they are proportional in the sense of the Fifth Book of Euclid.

The relation between these three kinds of proportion may be thus exhibited:—

In arithmetic proportion the differences are equal; that is, they are as the *first to itself*. In geometric proportion they are as the first to the *second* (by conversion and alternation). And in harmonic proportion they are as the first to the *third*.

2. Let a right line AB, be cut internally at O, and externally at O' in the same ratio; that is, so that $AO : BO :: AO' : BO'$; then,
