Figure 1: A 3D scatter plot showing the relationship between the number of species (S) and the number of individuals (N) for 10 different species. The x-axis is labeled "Number of individuals" and ranges from 0 to 100. The y-axis is labeled "Number of species" and ranges from 0 to 10. The z-axis represents the species index from 1 to 10. Each species is represented by a different colored dot. Species 1 (red) has approximately 100 individuals and 1 species. Species 2 (orange) has approximately 80 individuals and 2 species. Species 3 (yellow) has approximately 60 individuals and 3 species. Species 4 (light green) has approximately 40 individuals and 4 species. Species 5 (green) has approximately 20 individuals and 5 species. Species 6 (teal) has approximately 10 individuals and 6 species. Species 7 (blue) has approximately 5 individuals and 7 species. Species 8 (purple) has approximately 2 individuals and 8 species. Species 9 (pink) has approximately 1 individual and 9 species. Species 10 (grey) has approximately 1 individual and 10 species. The plot shows a clear inverse relationship between the number of individuals and the number of species.
