WALTON AND MABERLY,

UPPER GOWER STREET, & IVY LANE, PATERNOSTER ROW.

1859.

Price One Shilling.

160 . c . 25.

OPINIONS OF THE PRESS.

"This work fully shows the value of the electric cautery in dentistry."—THE LANCET.

"The importance of the subject, coupled with the lucid manner in which it is handled, renders the essay worthy of being strongly recommended to the profession in the convenient separate form in which it is now published."—QUARTERLY JOURNAL OF DENTAL SCIENCE.

"It is said that by this process toothache is often cured, and the diseased tooth may remain serviceable for many years."—MED. TIMES AND GAZETTE.

"The advantages of the electric cautery over the actual cautery consist in the facility with which the amount of heat may be regulated, and in the light given off by the wire, which enables the operator to apply the cautery to the sensitive pulp only, without carbonizing the cavity of the tooth."—PHARMACEUTICAL JOURNAL.

"The perusal of the interesting little *brochure* by Mr. HARDING will impress the reader favorably with its merits. * * * * It commends itself as affording a quick and simple means, which will compare favorably with other expedients more commonly resorted to for relief from a very sore and much prevailing malady."—MONTREAL MEDICAL CHRONICLE.

"Toothache is really such a formidable malady, that we are glad to inform our readers of any quick and effectual means of cure."—MEDICAL CIRCULAR.

ADVERTISEMENT.

The flattering reception which the first edition of this little volume has met with, as evidenced in its rapid sale ; and the favourable manner in which it has been noticed by the Medical and Dental Journals, in this country and in America, has convinced me that my humble efforts in the cause of Dental Science have been appreciated.

With some additions and alterations in the present edition, I have only to add that increased experience has more fully confirmed all that is stated throughout its pages.

ADVERTISEMENT TO THE FIRST EDITION.

The greater part of the following pages appeared in the *Lancet*; a desire having been expressed to see the matter in a separate form, has induced me to publish this little volume, which is submitted to my brethren of the Dental Profession.
