PREFACE

In the following pages the attempt is made to give a presentation of the subject of hydraulics without the use of higher mathematics. The degree of preparation required of the reader is merely that now given in high schools, and includes only arithmetic, algebra, trigonometry, and an elementary course in mechanics. In particular the author has had in mind the students in the upper classes of secondary technical schools, and it has been his aim to present the subject in such a manner that it may be readily comprehended by them.

It is believed that the essential principles and methods of hydraulics have been covered, although an expert can easily criticise the book on the ground that certain topics have been inadequately treated or omitted altogether. While it has been harder for the author to decide what should be omitted than what should be included, it has been his intention to discuss, as fully as seemed consistent with the assigned limit of space, those topics which are of greatest importance in practical engineering work.

CONTENTS

CHAP. 1. HYDROSTATICS

	PAGE
ART. 1. UNITS OF MEASURE. 2. PHYSICAL PROPERTIES OF WATER. 3. THE WEIGHT OF WATER. 4. ATMOSPHERIC PRESSURE. 5. TRANSMISSION OF PRESSURE. 6. HEAD AND PRESSURE. 7. LOSS OF WEIGHT IN WATER. 8. PRESSURE ON SUBMERGED SURFACES. 9. CENTER OF PRESSURE ON RECTANGLES. 10. PRESSURES ON GATES AND DAMS. 11. NUMERICAL COMPUTATIONS.....	1

CHAP. 2. THEORETIC HYDRAULICS

ART. 12. LAWS OF FALLING BODIES. 13. VELOCITY OF FLOW FROM ORIFICES. 14. FLOW UNDER PRESSURE. 15. INFLUENCE OF VELOCITY OF APPROACH. 16. THE PATH OF A JET. 17. ENERGY OF A JET. 18. IMPULSE AND REACTION OF A JET. 19. THEORETIC DISCHARGE. 20. STEADY FLOW IN SMOOTH PIPES.....	21
---	----

CHAP. 3. FLOW FROM ORIFICES AND TUBES

ART. 21. THE STANDARD ORIFICE. 22. COEFFICIENT OF CONTRACTION. 23. COEFFICIENT OF VELOCITY. 24. COEFFICIENT OF DISCHARGE. 25. CIRCULAR VERTICAL ORIFICES. 26. RECTANGULAR VERTICAL ORIFICES. 27. SPECIAL ORIFICES. 28. THE STANDARD SHORT TUBE. 29. VARIOUS FORMS OF TUBES. 30. LOSSES OF HEAD. 31. SUDDEN CHANGES IN SECTION. 32. NOZZLES AND JETS.....	39
--	----

CHAP. 4. FLOW THROUGH PIPES

ART. 33. FUNDAMENTAL IDEAS. 34. LOSS OF HEAD IN FRICTION. 35. VELOCITY AND DISCHARGE. 36. LONG PIPES. 37. PIEZOMETERS. 38. THE HYDRAULIC GRADIENT. 39. A COMPOUND PIPE. 40. HOUSE SERVICE PIPES. 41. STEEL AND WOOD PIPES. 42. A PIPE WITH NOZZLE.....	65
--	----

	PAGE
CHAP. 5. FLOW IN CONDUITS AND RIVERS	
ART. 43. DEFINITIONS. 44. FORMULA FOR MEAN VELOCITY. 45. CIRCULAR CONDUITS. 46. RECTANGULAR CONDUITS. 47. KUTTER'S FORMULA. 48. DITCHES AND CANALS. 49. STREAMS AND RIVERS. 50. TRANSPORTING CAPACITY. 51. STEADY NON-UNIFORM FLOW.....	89
CHAP. 6. MEASUREMENT OF WATER	
ART. 52. DIRECT MEASUREMENT. 53. STANDARD WEIRS. 54. DISCHARGE OVER WEIRS. 55. OTHER WEIR FORMULAS. 56. WATER METERS. 57. THE PITOT TUBE. 58. CURRENT METERS. 59. GAGING OF STREAMS. 60. VELOCITIES IN A CROSS SECTION.....	106
CHAP. 7. HYDRAULIC MOTORS	
ART. 61. EFFICIENCY OF A MOTOR. 62. OVERSHOT WHEELS. 63. BREAST AND UNDERSHOT WHEELS. 64. VERTICAL IMPULSE WHEELS. 65. THE REACTION TURBINE. 66. OUTWARD-FLOW TURBINES. 67. INWARD-FLOW TURBINES. 68. MEASUREMENT OF POWER.....	125
CHAP. 8. PUMPS AND PUMPING	
ART. 69. THE SUCTION PUMP. 70. THE FORCE PUMP. 71. PUMPING ENGINES. 72. THE CENTRIFUGAL PUMP. 73. OTHER KINDS OF PUMPS. 74. THE HYDRAULIC RAM. 75. PUMPING THROUGH PIPES.....	140
INDEX.....	155

ELEMENTS OF HYDRAULICS

CHAPTER 1

HYDROSTATICS

ARTICLE 1. UNITS OF MEASURE

Hydraulics is that science which treats of water in motion. Hydrostatics is that part of hydraulics which treats of the equilibrium and pressure of water for the case when it is at rest. The unit of linear measure used in this book is the foot, while inches must always be reduced to feet for use in the hydraulic formulas. The units of volume are the cubic foot and the gallon, but the latter must always be reduced to cubic feet for insertion in the formulas. The gallon used in the United States contains 231 cubic inches, while in Great Britain the Imperial gallon is employed which is about 20 percent larger.

The unit of force is the pound, or the force exerted by gravity at the surface of the earth on a mass of matter called the avoirdupois pound. This unit is also used in measuring weights and pressures of water. The intensity of pressure is usually measured in pounds per square inch. The unit of time to be used in all hydraulic formulas is the second, although in numerical problems the time is often stated in minutes, hours, or days. Velocity is defined as the space passed over by a body in one second under the condition of uniform motion, so that velocities are to be always expressed in feet per second, or are to be reduced to these units if stated in miles per hour or
