P R E F A C E .

IN presenting the **LONDON DISSECTOR**, under its present form, to the American Student, it may be proper to remark, that I have been prompted by no feelings of vanity; no eagerness for authorship. I felt, even in my own period of study, the difficulty of procuring brief and satisfactory guides for the student of anatomy: I perceived with what reluctance he perused the larger works intended to direct him in his dissection; how rapidly he hurried over the lengthy description of the various parts, and I was led to believe, that a short and sufficiently extensive manual, would be welcomed as a desideratum by the young dissector. Believing, that with a few alterations and additions, the **London Dissector** might easily be transformed into a work of this description, I have been induced to undertake the task.

It is but just, however, to acknowledge, that for these additions I have been indebted to authors of well known celebrity; that I have drawn freely from Bell's admirable treatise on Anatomy; and Shaw's excellent work on Dissection; and that should the present volume be still received as a work of merit, the praise must redound to the original author of the work, not to the compiler. His labor will be amply compensated, if it but facilitate the progress of the student, in the acquisition of anatomical knowledge.
