"If thine eye be single, thy whole body shall be full of light." — JESUS CHRIST.

13-15:32 AM

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that proper record-keeping is essential for transparency and accountability, particularly in the context of public administration and government operations. The text notes that such records are not only required by law but also serve as a critical tool for monitoring performance and identifying areas for improvement.

2. The second part of the document outlines the specific requirements for record-keeping, including the need for clear, concise, and consistent documentation. It stresses that records should be maintained in a secure and accessible format, ensuring that they are readily available for review and audit. The text also highlights the importance of regular updates and the timely reporting of any changes or discrepancies.

3. The third part of the document addresses the challenges associated with record-keeping, such as the volume of data generated and the potential for human error. It suggests that the implementation of robust information management systems and the use of standardized templates can help mitigate these risks. Additionally, the text emphasizes the need for ongoing training and education for staff to ensure they are fully equipped to handle the responsibilities of record-keeping.

4. The fourth part of the document discusses the role of record-keeping in the broader context of organizational governance and compliance. It notes that accurate records are essential for demonstrating adherence to applicable laws, regulations, and internal policies. The text also highlights the importance of record-keeping in the event of legal proceedings or audits, where it can provide crucial evidence and support for the organization's position.

5. The fifth part of the document concludes by reiterating the significance of record-keeping and the commitment to maintaining high standards of accuracy and integrity. It encourages all staff members to take ownership of their record-keeping responsibilities and to work together to ensure the organization's records are comprehensive, reliable, and up-to-date.

THE LIGHT OF THE WORLD.

THE empty equatorial seemed to expand with expectation. The huge telescopic tube, now ignominiously chained upside down to its brick pier, impatiently awaited its night of glory.

The workshop hummed under its breath. The apprentice, who was mechanically polishing a five-inch lens in wet rouge, cast longing eyes, as he lifted them from his irksome task, at the zinc-covered door. Workmen, when they entered that mysterious apartment, so zealously guarded against fire, did so with hushed steps, and with faces knit with excitement. No loud voices were heard from within; and even the busy master gave his orders with muffled lips, lest a harsh breath should chance to ruin the monument of his life.

Upon a padded disk the huge lens lay. For the last two years no hand but the master's had touched it. And now, with a caress softer than the falling

petal of a rose, Thomas Constant bent over the heart of the largest refractor in the world. If his thumb hovered upon the right spot the gigantic lens would be perfect; if it touched the wrong, the crown of his labors might be ruined. The three assistants watched their chief anxiously; as he bent and peered into the fifty-inch disk, he looked like a mediæval magician searching out all mystery and focusing all light.

For one ray persistently erred from its centre. Where on that majestic surface was the single inequality of contour that years of polishing had left? So limpid, so transparent the lens beneath the master's gaze that it seemed as if it were a section of ether miraculously imprisoned beyond the murky atmosphere of this planet, and crystallized into a permanent form. Where on that exterior, so polished that its surface was more velvety than the finest cut gem, so relucant that it was impossible, except for the expert, to tell where its outline began or ended, was the infinitesimal imparity that puzzled its maker? Thomas Constant swept his hand over the disk. He did not yet touch his handiwork; he was judging it by the feeling of warmth. For so sensitive was the glass beneath his pulses that even such passes caused
