PREFACE TO THE FIRST EDITION.

THE object of this small work is to lay before the practitioner and student of medicine, a few concise and simple methods, by which the various tissues of the body may be prepared for examination with the microscope.

I do not claim any originality in these methods, but I recommend them from my own personal experience as the best, easiest, and cheapest to carry out.

The use of dyes for staining the tissues is a comparatively new branch of the science of Histology, and its value is being proved every day.

I have been engaged in experiments with all the various colouring agents for a long time, and in trying their effect in double and treble staining, and I have given the result of those which have proved most successful hitherto. I have also added a list of the aniline dyes, those soluble in water, and those soluble in spirit, which will be found very useful by anyone wishing to make experiments in staining.

Briefly, but sincerely, I offer my best thanks to Dr. Klein, F.R.S., for the assistance which he has at all times freely and generously given me.

H. G.

94, GOWER STREET,
October 1, 1880.

•

PREFACE TO THE THIRD EDITION.

THIS edition has been thoroughly revised and a quantity of new matter introduced.

The various staining and other methods given will be found those most useful for the work of the present day.

CONTENTS.

PART I.—PRACTICAL HISTOLOGY.

CHAPTER I.

INTRODUCTION.

	PAGE
The Microscope	4
Achromatic Condensers	11
Stand Condenser	12
On Large Stands for High Powers	13
On the Binocular Microscope	13

CHAPTER II.

ON PREPARING TISSUES FOR EXAMINATION.

Chromic Acid Mixture	16
Müller's Fluid	17
Dilute Spirit	18
Bichromate of Potash	19
Bichromate of Ammonia	19
Chromate of Ammonia	19
Chloride of Gold	19
Silver Nitrate	21
Picric Acid	22
Osmic Acid	23

CHAPTER III.

ON SECTION CUTTING.

The Freezing Microtome	26
Sharpening the Razor	28
To prepare the Material	29
To make Mucilage	29
Cutting the Sections	30
