LECTURE	PAGE
I.—INTRODUCTORY—DIAGNOSIS	1
II.—STRUCTURE OF THE URETHRA	19
III.—STRUCTURE OF THE URETHRA (<i>continued</i>)	38
IV.—HYPERTROPHY OF THE PROSTATE AND ITS CONSEQUENCES	56
V.—RETENTION OF URINE	75
VI.—EXTRAVASATION OF URINE AND URINARY FISTULE	87
VII.—STONE IN THE BLADDER	98
VIII.—LITHOTRITY	112
IX.—LITHOTOMY	128
X.—CYSTITIS AND PROSTATITIS	143
XI.—DISEASES OF THE BLADDER: PARALYSIS; ATONY; JUVENILE INCONTINENCE; TUMOURS	157
XII.—HEMATURIA AND RENAL CALCULUS	170

P R E F A C E.

I THINK it right to say that these Lectures were never committed to writing by me. They were delivered in a colloquial style, after the arrangement of the subject had been well considered, and were reported verbatim by one of our best shorthand writers. The copy furnished by him was corrected, some of those tautologies which seem to be necessary in teaching removed, and then sent to the *Lancet*. But each Lecture still required more space than was available in the columns of a weekly journal, and I further reduced it, perhaps one-fourth. I now present, in one small volume, at the suggestion of, I may truly say, numerous correspondents, known and unknown to me, the corrected copy in full, unchanged in form, and therefore unshorn of the familiarities which the conversational style peculiar—and, I believe, appropriate—to the class-room demands. And I do this, also, because I prefer that these Lectures, originally short, should not suffer any abbreviation, and because I desire to offer, not merely to the members of my own clinical class, but to students at large, some of the fruit of a long and careful study in that field of practical medicine, in its widest sense, to which they relate.

PREFACE TO THE SECOND EDITION.

THE first edition having been exhausted in less than twelve months, the second is almost a reprint of the first, none but very slight alterations having been found necessary.

October, 1869.

DISEASES

OF

THE URINARY ORGANS.

LECTURE I.

INTRODUCTORY : DIAGNOSIS.

GENTLEMEN,—I propose to give a course of lectures on the Surgical Diseases of the Urinary Organs, and my object will be to afford you that information which will be most useful at the bedside. I shall not consider their anatomy or physiology, since that would make the course much too long. In the systematic lectures of the College it is impossible to communicate all those practical manœuvres, those little things which one arrives at by experience, either in the way of diagnosis or treatment, which are so valuable in practice hereafter; neither is it possible that you should all acquire them at the bedside, since no hospital can furnish patients sufficient for the purpose; but you can learn a great deal by the conversational communications which are made here. It will be my aim to render available the result of experience which it has cost me years to acquire, and I shall do my best to furnish to you what of it is thus communicable in as many hours.

I have selected this course of clinical lectures on the
