PREFACE.

The following pages were not compiled with a view to publication, but merely as an assistance in private tuition. They are now placed before the public, in consequence of the repeatedly expressed opinion of competent judges, that they are calculated to supply a want, which has hitherto existed in school books.

The object of the present little work is, to throw before the pupil a broad sketch, which shall open the mind to the study of literature *as a whole*; and thus pave the way for an intelligent appreciation of the labours of those authors of ancient and modern times, who have exercised more than ordinary influence over the manner of thinking and writing of their own and succeeding generations. In the compilation of this volume, great assistance has been derived from Schlegel's admirable Lectures on Literature, a book containing much valuable and highly interesting matter.

LITERATURE OF ANTIQUITY.

.

GREECE.

The Greeks are the only people who can be said to have, in almost every respect, created their own literature. The Romans and the modern Europeans set out with the possession of a complete body of literature, derived from nations more ancient than themselves: the Romans receiving this legacy from the Greeks; and the modern Europeans being the common heirs of both these peoples, as well as of the learning and refinement of the Orientals,—possessions which, till within the last two centuries, they can scarcely be said to have appropriated to their own use, or to have rendered more valuable by the additions of their own ingenuity.

The whole happy period of the political history of Greece, as well as all the glories of her literature, occupied no greater space than the 300 years which intervened between *Solon*, 594, and *Alexander*, 323. Demosthenes, who was born only one year later than Alexander the Great, was the last great writer whose works were addressed to the Greeks as a
