## CONTENTS

Introduction	PAGE 9
--------------	-----------

### PART I.

#### THE MEANINGS OF REALITY AND TRUTH

§ 1. The Meanings of Object-matter and Subject-matter	25
Definitions—What is a notion?—Ambiguity of "subject-matter."	
§ 2. Philosophy as Objective Logic	28
Ordinary logic relatively subjective—"Term" and "name"—Data ulterior to subject-matter, as such—Theory of induction as one part of objective logic.	
§ 3. "Objective Logic" <i>versus</i> "Metaphysics"	30
The legitimate sphere of metaphysics—its relation to theology—"objective logic" a preferable term.	
§ 4. The Ultra-universality of Object-matter	31
Due to exuberance of poetic imagination—due to verbal ideas—All hypothetical things are object-matters.	
§ 5. The Universality of Real Object-matter	33
Modality of reality—Science in relation to immediate experience—Subject-matter as object-matter.	
§ 6. The Natural Transcendence of Subject-matter by Object-matter	34
The first law of objective logic—illustrated by the case of a returned traveller lecturing on African tribes.	
§ 7. Sciences as Subject-matters having Object-matters	36
Extent and limitations of science, as such—the relation of the subject-matter to the object-matter (1) of astronomy, (2) of ordinary logic.	
§ 8. The Logical Forms of Reality, Science, and Truth	37
The second and third laws of objective logic—these do not cover, but properly precede, the criteria of psychology.	
§ 9. Truth as Symbolic Reference	38
Substantial likenesses in (1) the physical, (2) the sensuous, and (3) the subject-material, spheres, contrasted with the symbolic reference of thought.	
§ 10. Identity and Distinction	40
Truthfulness and truth—propositions either true or untrue—The parts of a proposition—Negative terms as predicates—Fourth law of objective logic—Distinction and relation.	

	PAGE
§ 11. The Import of Logical Equations - - -	42
Their form—Simple synonyms—Equations, singular and general—Statements of modal polarity—Analyses, extensive and intensive—Definitions—J. S. Mill on definitions.	
§ 12. The Three Degrees of Distinction - - -	46
Identity—Whole-to-part relation—Overlapping relation—Mutual exclusion	
§ 13. The Four Formal Types of Statement - - -	49
The Universal Affirmative—the Particular Affirmative—the Particular Negative—the Universal Negative—the last alone is completely definite.	
§ 14. The Objective Import of Formal Statements - - -	52
Deficiency and value of Particular statements—the Universal Affirmative definite as an instrument of description, though not of classification.	
§ 15. Object-matters, Singular and General - - -	55
Definitions—Existence in <i>plura</i> —Proper names and other singular names—A distinction important in objective logic—W. S. Jevons on "singular" names of substances—on "singular" abstract names—Mill on "singular" abstract names—abstract names properly general—collective names—modal polarity of the singular and the general.	
§ 16. Object-matters, Concrete and Abstract - - -	62
Definitions—Attribute, quality, and relation—A fundamental distinction—J. S. Mill's treatment of adjectives as concrete names—Dr. Keynes's treatment of abstract substantives as concrete names—Abstract object-matters which are quasi-concrete—those which are recognised to be abstract—those which are treated as if concrete—the contention of matter-sceptical physicists—Hegelian logic—theories of a mind-entity or spirit—the soul abstract—material objects or systems alone concrete—Concrete reality in its individual, sub-individual, and super-individual forms.	
§ 17. Material and Logical Components - - -	72
Definitions—the possession of parts—parts as sub-individual objects—atomism insufficient as an explanation of things—modal polarity of parts (or substance) and attributes (or nature)—salient attributes which comprehend all others.	
§ 18. The Modes of Extension and Intension - - -	75
Definitions—Intension according to Dr. Keynes—four kinds of intension—the absolute and relative modes.	
§ 19. The Inverse Relation of Extension to Intension - - -	79
Genus and species—the more instances the fewer common attributes, and <i>vice versa</i> —individual intension exceeds that of specific counterparts—the relation obtains between genera and species which are quasi-concrete or evidently abstract—absolute extension with minimum intension—the minimum intension of reality involves reference to something (a) primary, (b) singular, (c) concrete.	
§ 20. Reality Synthetically Viewed - - - - -	84
Real objects, though classified according to relative intension, necessarily possess absolute intension—Finite objects, though self-existent in comparison with attributes, are themselves dependent on conditioning objects—the fifth to ninth laws of objective logic.	

	PAGE
§ 21. The Correlation of Substance and Nature	91
The permanence of matter and energy does not constitute reality, as such—all known causation takes place through the agency of substance in relatively transient forms—Meanings of "nature" and "substance"—Real substance Protean—original homogeneity improbable—modal polarity of Nature and Substance—significance for modern philosophy.	
§ 22. The Natural Transcendence of Knowledge by Reality	92
Transcendence of knowledge by primary reality—Analogy and antithesis between causation and reason—Penalty and privilege of "the pale cast of thought"—Reason the true Logos—Faust's soliloquy—Transcendent extension of reality, in number, time, space, immensity, and minuteness—Transcendent intension of reality—Résumé—Natural transcendence no discouragement to science.	
§ 23. The Noumenal Aspect of Reality	100
Modern phenomenism—ambiguity of the term phenomenon—Huxley's use of it—Phenomena, as immediate experiences, cease to be such in reflection—A tree as an object of the understanding—A series of propositions standing for a congeries of attributes—Co-existences observed and inferred—Attributes themselves are not merely phenomena, but are, or depend upon, objective relations—Correlation of the senses, with elimination of the more subjective elements—Locke's primary qualities—The intrinsic character of consciousness physically inexplicable—The determinism of science does not involve the automatism of mind—A glance at Haeckel's Monistic hypothesis—Importance of optics to physical science—The object-matters of physical science as natural noumena—comparison of a psychological with a physical laboratory.	
§ 24. The Knowable and the Unknowable	110
That which, as being, transcends knowledge is not therefore unknowable—the comprehension of knowledge is purely metaphorical—its possibilities, as knowledge, are boundless—Criticism of Spencer's "Unknowable Absolute"—natural noumena <i>versus</i> a supposed supernatural noumenon—Ultimate agnostic attitude of objective logic.	

## PART II.

## THE DISTINCTIVE GROUNDS OF THE SCIENCES

§ 1. The Place of a System of Sciences in the Philosophy of Knowledge	114
Résumé of Part I.—System of Science as one of two branches of Objective Logic.	
§ 2. The Meaning of "A Science"	116
Definition—science not simply systematised opinion—not necessarily physical, mathematical, or positive.	

	PAGE
§ 3. The Degrees of Distinction between Sciences - - -	118
Based on those between object-matters—(1) which include one the other—note on the relation between their corresponding subject-matters—(2) which are distinct in second degree—(3) which are distinct in third degree—system of science founded on distinctions of first degree.	
§ 4. Sciences, Concrete and Abstract - - -	122
Definitions—Examples.	
§ 5. A Method of Symbolising the Sciences - - -	123
The typical figures, 8 and 9, explained.	
§ 6. Sciences, Specialising and Generalising - - -	127
Their distinction defined—history evidently specialising—astronomy and physical geography also specialising—Peculiar relation of astronomy to chemistry, etc.—Comprehensive concrete sciences—Tentatively-coined terms marked with a 1.	
§ 7. The Fundamental Concrete Sciences - - -	132
Cosmology—Geognosy—not specialists' sciences, but forming philosophic introductions to science—†Proto-cosmology—†Perrbiology—Paleontology—Geology—Concrete Technology—importance to science of artificial objects—Biology—Zoology—†Peri-anthropology—Anthropology—its relation to scholarship—to history—to constructive sociology—†Ego-anthropology—Concrete Sociology—not limited to study of social relations.	
§ 8. The Specialising Concrete Sciences - - -	142
Astronomy—Specialising Geognosy—Meteorology—Geology—Geography and Topography—Physical Geography—Political Geography—Specialising Concrete Technology—Phylogeny—Anthropogeny—†Proto-anthropogeny—Ethnography—History—Biography—National History—Universal History—†Paleo-history—†Neo-history.	
§ 9. The Generalising Concrete Sciences - - -	148
† Etherology—Chemistry—Analytical Chemistry—Concrete Physics—Aerology—Hydrology—Mineralogy—Generalising branches of Geology and Concrete Technology—General Biology—Protistology—Botany—Generalising Zoology—Generalising Anthropology—†Paleo-Anthropology—Ethnology—Generalising †Ego-anthropology—Generalising Concrete Sociology.	
§ 10. The Sphere of Abstract Sciences - - -	155
Cross-division of concrete and abstract sciences—relations of abstract to specialising and generalising concrete sciences—formal and causal abstract sciences—physical and psychological abstract sciences—consciousness proper limited to animals—Haeckel's Monism hypothetical—cross-division of causal and formal abstract sciences.	
§ 11. The Abstract Cosmological Sciences - - -	162
(a) Formal :—Arithmetical Science—Arithmetic—Algebra—Statistics—Chronology—the relations of events in time—Geometrical Science—Theoretical Geometry—Mensuration—Chartography—(b) Causal :—Dynamics—Kinetics—Statics—Energetics.	

	PAGE
§ 12. The Abstract Biological Sciences - - -	171
(a) Formal:—Chorology—Morphology—Cytology—Histology—Organology—Pictorial Biology—(b) Causal:—Physiology—Troponomy—Gonamatology—Pathology—Phoronomy—Perlogy—"Biogeny" and "Ontogeny" not technically distinct sciences.	
§ 13. The Zoö-Psychological Sciences - - -	175
Their position explained—(a) Causal:—Psycho-physics—Optics—Chromatics—Acoustics—Harmonics—Psycho-physiology—Psycho-morphology—Pragmatology—(b) Formal:—Æsthesiology—Ethology—motive feelings—Nöbology.	
§ 14. The Abstract Anthropological Sciences - - -	184
Concerned with civilisation and culture—definitions of above—relations of above—culture not merely Hellenistic—its end lies in itself—subordination of æsthetic to moral and intellectual phases—relation of the two latter—four ways of viewing the departments of civilisation and culture—the increasing power of sociological criticism.	
§ 15. Sciences of the Departments of Civilisation - - -	191
Developments of pragmatology—the scope for an "Anatomy of Civilisation"—physical arts and social institutions—Abstract Technology—practical and athletic (etc.) arts—seven groups of practical arts—Abstract Sociology:—institutions, governmental and non-governmental—civil and military—a possible International Authority—three branches of civil polity—institutions, secular and ecclesiastical—doubtful utility of the latter—six groups of secular institutions.	
§ 16. Sciences of the Departments of Culture - - -	202
Æsthetics—the philosophy of the beautiful in relation to the fine arts—Ethics—Symbolic science—names and non-logical symbols.	
§ 17. The Secondary Sciences - - - - -	206
Extrinsic and intrinsic—microcosm of literature and science—universal symbolism of language—place of secondary science—Extrinsic Secondary Sciences—Philology—Lexicology—Grammar—distinctive and comparative branches—Principles of Oratory—Bibliography—Intrinsic Secondary Sciences—the play and work of the mind—Science of Imagination—Science of Literature—Science of Reflection—Mythology—Doctrine of Fallacies—Comte's three stages—Subjective Logic—Objective Logic—the last not solely secondary.	
§ 18. Concluding Remarks - - - - -	215
The foregoing classification not pedagogic or practical, but epistemological—progress from sciences of greater extension to those of greater intension—permanent features of the system of science—previous classifications—Professor Karl Pearson's view of the problem—Herbert Spencer's classification—Professor Pearson's classification—résumé of the treatise—questions reserved for future discussion.	

#### CORRIGENDA

---

- P. 56, § 15, second par. For "has continuity in time" read "exists at one point or during one unbroken period of time."
- P. 81, third par. For "unity of extension" read "some singular object."
- P. 84, line 11. For "innermost"—"outermost" read "next inner—next outer one."
- P. 86, footnote, third line from bottom. For "object" read "objects."
- P. 127, fourth line from top. Delete "italicised."
