RTHL

PREFACE

In this work the author has endeavored to prepare a text which would serve as a basis for a fifty- or sixty-hour course in Plane and Spherical Trigonometry as ordinarily presented in advanced secondary and elementary college courses.

Emphasis is placed upon drill work in the trigonometric identities, upon the applications of trigonometry to practical problems, and upon approximate calculations by means of natural functions. The more accurate results obtained by logarithmic calculations are emphasized in the solutions of oblique triangles; a uniform style of tabulating logarithmic calculations is suggested.

For the benefit of those who may wish to pursue advanced courses in mathematics, a brief discussion of analytic trigonometry is presented in Chapter IX. In Part II the elements of spherical trigonometry are developed in so far as to include the ordinary formulæ necessary in the solution of right and oblique spherical triangles.

DAVID A. ROTHROCK.

BLOOMINGTON, INDIANA,
December, 1909.

CONTENTS

PART I

PLANE TRIGONOMETRY

CHAPTER I

Trigonometric Functions of Acute Angles

ART.	PAGE
1. Trigonometry	1
2. Functions of Acute Angles	2
3. Functions of Complementary Angles	3
Exercises	5
4. Fundamental Relations among the Trigonometric Functions	6
5. Fundamental Identities	7
6. Variation of the Trigonometric Functions	7
7. Transformation of Identities	7
Exercises	8
Exercises	10
8. Functions of Particular Angles: 0° , 30° , 45° , 60° , 90°	13
Exercises	14
9. Table of Trigonometric Functions	15

CHAPTER II

Solution of Right Triangles

10. Fundamental Formulas	16
11. Projections	17
12. Components	18
13. Resultant	18
14. Projected Areas	21
15. Areas of Right Triangles	21
16. The Isosceles Triangle	22
17. Notations of Direction	23
18. To solve Right Triangles	25
Exercises	26

CHAPTER III

Trigonometric Functions of Any Angle

19. Axes. Quadrants	31
20. Coordinates, Abscissa, Ordinate	31
21. Definitions of the Functions	32

ART.	PAGE
22. Laws of Signs	33
Exercises	34
23. Functions of Negative Angles	34
Exercises	35
24. Functions of $90^\circ - \theta$ and $90^\circ + \theta$	36
25. Functions of $180^\circ - \theta$ and $180^\circ + \theta$	37
Exercises	38
26. Line Values of the Functions	39
Exercises	41
27. Graphs of the Trigonometric Functions	42

CHAPTER IV

Measurement of Angles

28. Units of Measure	44
29. Relations between Degree and Radian Measure	44
Exercises	45
30. The Length of any Arc	46
31. Segment and Sector Areas	47
Exercises	47

CHAPTER V

Functions of Two Angles. Multiple Angles

32. To develop $\sin(\alpha + \beta)$ and $\cos(\alpha + \beta)$	50
33. To develop $\tan(\alpha + \beta)$	51
34. Important Formulas	52
Exercises	52

Functions of Multiple and Sub-Multiple Angles

35. Functions of 2α	53
36. Functions of 3α	54
37. Half-angle Formulas	54
Exercises	55

Sum and Difference Formulas

38. Converting to Products	56
39. Converting to Sum or Difference	57
Exercises	57

CHAPTER VI

Logarithms

40. The Index Laws	60
41. Definition of Logarithms	61

CONTENTS

ix

ART.	PAGE
42. Systems of Logarithms	62
43. Laws governing the Use of Logarithms	62
44. Characteristic and Mantissa	63
45. Use of Tables	65
46. Conversion of Common to Napierian Logarithms	67
Exercises in Use of Logarithms	67

CHAPTER VII

Solution of Triangles in General

47. The Theorem of Sines	69
Applications of the Theorem of Sines	71
48. The Theorem of Tangents	73
Applications of the Theorem of Tangents	74
49. The Theorem of Cosines	75
Exercises	77
50. The Half-angle Theorems	77
Application of the Half-angle Theorems	79

Areas of Triangles

51. Area in Terms of Sides and Angles	80
52. Area in Terms of r	81
53. Expressions for Area	82
Exercises	82

CHAPTER VIII

Inverse Functions. Trigonometric Equations

54. Inverse Notation	87
55. Inverse Identities	88
Exercises	89
56. Definitions	90
57. Solutions	91
58. Simple Equations	91
Exercises	92
59. Equations of the Form $r \cos \phi = a$, $r \sin \phi = b$	93
60. Equations of the Form $r \sin \theta \cos \phi = a$, $r \sin \theta \sin \phi = b$, $r \cos \theta = c$	94
61. To solve $a \cdot \sin x + b \cdot \cos x = c$	95
62. To solve $\sin (x + \phi) = a \sin x$	95
63. To solve $\tan (x + \phi) = a \tan x$	96
64. To solve $x = a + \beta \sin x$	97

CHAPTER IX

Complex Numbers. DeMoivre's Theorem. Trigonometric Series.

Exponential and Hyperbolic Functions

65. Roots of Quadratic Equations	99
Exercises	100

ART.	PAGE
66. Complex Numbers expressed Trigonometrically	100
67. DeMolvre's Theorem	101
68. Raising to Powers and extracting Roots	102
69. Value of $\sin z$, $\cos z$ in Terms of x	104
70. Summation of Series	108
Examples	109
71. The Exponential Series	110
72. Euler's Formulas	111
Exercises	112
73. The Hyperbolic Functions	112
74. The Gudermannian	116

PART II

SPHERICAL TRIGONOMETRY

CHAPTER X

General Definitions. The Right Triangle

75. Definitions and Geometric Properties	117
76. The Polar Triangle	118

The Right Spherical Triangle

77. Definitions	119
78. Trigonometric Relations	119
79. Important Formulas	120
80. Napier's Rules of Circular Parts	121
81. Relative Dimensions of Sides and Angles	122
82. The Isosceles and Quadrantal Triangles	122
83. Solution of Right Spherical Triangles	123
Exercises	124

CHAPTER XI

The Oblique Spherical Triangle

84. The Theorem of Sines	126
85. The Theorem of Cosines. Side and One Angle	127
Modified Formula	128
86. The Theorem of Cosines. Angles and One Side	128
87. The Half-angle Formulae	129
1) The Half-angles in Terms of the Sides	129
2) The Half-sides in Terms of the Angles	130
88. Napier's Analogies	131
89. The Area of a Spherical Triangle	133
90. Solution of Oblique Spherical Triangles	133
Exercises	135

CONTENTS
