## PREFACE.

WHEN the late Sir Clement Le Neve Foster set before me the project of preparing a book on the subject of Peat, I did not realise how quickly the industry would develop. But the peat resources of the world are so vast, and the commercial possibilities so great, that engineers and scientists, both at home and abroad, are giving close attention to the subject, and a warm welcome was given to the publication of *Peat*: *Its Use and Manufacture*, under the joint authorship of the late Mr P. R. Björling and myself.

This present volume is designed as a companion to that above mentioned, and presents this important industrial question from a commercial point of view.

To appreciate the seriousness of the problem of utilising the bog-lands, it is only necessary to realise the great surface covered by peat bogs on the Continent of Europe alone. This amounts to 212,700 square miles. The survey of Ircland gives 2,858,150 acres of peat bogs. In Canada more than 30,000,000 acres of land are known to be peat bog, and in the United States 20,000,000 acres. In Newfoundland two-thirds of the surface of the country is said to consist of peat bogs.

The various processes described in this book, evolved by a long course of patient investigation and experience, and the numerous applications for patents, are evidences of

235536

#### PREFACE,

a new impetus to the subject. Gas engineers have lately been paying special attention, with most successful results, to the production of gas from peat and the recovery of the valuable by-products, in connection with central electric lighting stations, and their efforts will doubtless go a long way in assisting to solve the problem of the utilisation of peat as a fuel.

The task of sifting and collating the great mass of data placed at my disposal has been a heavy one, and I tender my sincere thanks to the following friends and firms for their encouragement and co-operation, viz. :-- Martin Ekenberg, Ph.D.; Herman C. Woltereck, Ph.D.; Dr Eugene Hannel (Canadian Department of Mines); Dr Arthur Heinemann; A. B. Lennox, C.E.; Capt. H. Riall Sankey, R.E. (Ret.), M.I.C.E.; Erik Nyström, M.E. (Canadian Department of Mines); Crossley Bros., Ltd.; Thos. Rigby, A.M.I.M.E.; Candy Filter Co., Ltd.; Sulphate of Ammonia Co., Ltd.; The Power-Gas Corporation, Ltd.; Uskside Engineering Works Co., Ltd.; J. Stevens, M.I.M.E.; Oberbayerische Kokswerk Fabrik, of Beuerberg; Controller of His Majesty's Stationery Office; Director of the Imperial Institute; Secretary of the Department of Agriculture and Technical Instruction for Ireland; Secretary of the Motor Union of Great Britain and Ireland; the Canadian Office, London; United States Geological Survey, Washington; American Consular-Agent W. B. Murphy, Sorau, Germany; A. Heinen; the Swedish Chamber of Commerce, London; and to the Editors of the various Journals quoted.

I desire also to express my appreciation of the care bestowed by the publishers in the production of the work, and for their ready assistance in all questions regarding the arrangement of text, etc.

FREDERICK T. GISSING.

October 1909.
