FOREWORD

BROADLY speaking, the purpose of the school of applied science is to give its students such a training as will enable them to attain the highest success in their professional careers, and at the same time to educate them so liberally that they may be well fitted for the private and social responsibilities that lie before them. With this end in view, our *Alma Mater* aims to combine a technological with a cultural education; her ideal is to produce professional leaders who at the same time shall be broad-minded men.

The world at large, unfortunately, knows but little of Undergraduate Technology, of the opportunities—educational and social—which the Institute has to offer; and the need of a book which should be, in the best sense, descriptive of the School has long been felt by both alumni and undergraduates. The present publication contains information which it is hoped will be equally of interest to prospective students and to those who have just entered the Institute.

IF this little volume fulfils its purpose of making better known the real Technology, it will be largely due to the suggestions and help received from the Faculty and Instructing Staff, to the generosity of numerous Alumni, and to the hearty co-operation of many others interested in the welfare of the School.

As students of M. I. T., we desire to express our appreciation of the kind assistance which has made possible the completion of this undertaking, and especially to extend our thanks to Arthur A. Noyes, former acting president; to Alfred E. Burton, dean; to Henry G. Pearson, associate professor of English; and to Isaac W. Litchfield of the alumni association.
