PREFACE

THIS is the first of a series of two books in mathematics for the seventh and eighth grades. These books assume that the pupil has mastered the work in arithmetic usually given in the first six grades. They continue the work in arithmetic by drill to obtain speed and accuracy, a study of percentage and its applications in ordinary business and in other everyday affairs, and a study of mensuration. They extend the mathematical content of the course of the seventh and eighth grades by including those parts of elementary algebra and geometry that are adapted to the abilities of the pupils of these grades. This extension is made possible by the omission of the more difficult and technical applications of arithmetic found in the traditional course. It is believed that these books contain enough of algebra and geometry so that a year may be gained in the later course in the high school.

- Algebra is approached through the formula which is its most practical aspect for the beginning pupil. Throughout the course the pupil is given practice in stating rules as formulas and formulas as rules until the formula comes to be a natural expression for mathematical truths. Other algebraic notions included are the equation, negative numbers, and the graph. Common geometric notions — angle, perpendicular, triangle, polygon — are introduced and used in constructions and various problems in mensuration. Many of the important theorems of elementary geometry are developed from observation and construction and are used in applied problems. It is believed that the familiarity thus obtained with geometric truths will appreciably shorten

the time needed for formal geometry later in the course. In general, after algebraic and geometric notions have been introduced they are used as often as possible so as to unify the three types of work.

This book for the seventh grade contains (1) much drill in the fundamental operations of arithmetic; (2) practice in the interpretation of problems; (3) exercises in the use of the literal notation in interpreting and evaluating formulas; (4) a study of percentage and its applications to common life as well as to business problems; (5) the study of a considerable number of geometric notions, theorems, and constructions without demonstration.

CONTENTS

CHAPTER I

SOLUTION OF PROBLEMS. REVIEW OF FUNDAMENTAL OPERATIONS

	PAGE
1. Directions for Solving Problems	1
2. The Addition Table	5
3. The Subtraction Table	5
4. The Multiplication Table	6
5. The Division Table	7
6. Exercises for Practice in Addition	9
7. Cash Accounts	10
8. Finding Averages	12

CHAPTER II

THE FORMULA. REVIEW OF FRACTIONS

9. Some Useful Terms	17
10. Problems without Numbers	18
11. The Cost Formula	20
12. Making Formulas	22
13. Formulas for Practice	26
14. Reduction of Fractions	28
15. Exercises for Practice	29
16. Some New Symbols	32

CHAPTER III

DECIMAL FRACTIONS AND THE METRIC SYSTEM

17. Reading and Writing Numbers	36
18. Problems Involving Large Numbers	39
19. Reduction of Decimal Fractions to Common Fractions	42

	PAGE
20. Multiplication and Division by Powers of 10	41
21. Multiplication of Decimal Fractions	43
22. Division of Decimal Fractions by Integers	44
23. Reduction of Common Fractions to Decimal Fractions	44
24. Division by Decimals	45
25. Getting Results to a Desired Degree of Accuracy	47
26. Advantages of the Metric System	51
27. Linear Measure	51
28. Square Measure	55
29. Cubic Measure	55
30. Capacity and Weight	56
31. Equivalents	57

CHAPTER IV

PERCENTAGE

32. The Meaning of the Term Per Cent	63
33. Summary	64
34. Changing Per Cents to Decimals	65
35. Important Equivalents	66
36. To Find Any Per Cent of a Number	68
37. A Per Cent More or Less than a Number	71
38. To Reduce Any Common Fraction to Per Cent	73
39. To Find What Per Cent One Number Is of Another	74
40. To Find a Number of Which a Certain Per Cent Is Known	77
41. Problems of Food Values	81

CHAPTER V

APPLICATIONS OF PERCENTAGE

42. The Per Cent of Gain or Loss	83
43. To Find the Cost When the Selling Price and the Gain or Loss Per Cent Are Known	85
44. Profit and Loss Formulas	87
45. Meaning of Commercial Discount	89
46. Bills	91
47. Problems of the Dairyman	96

CONTENTS

vii

CHAPTER VI

INTEREST

	PAGE
48. Meaning of Interest	100
49. Expressing Time as Years	102
50. The Interest Formula	103
51. The Six Per Cent Method	104
52. Interest at Any Given Rate by the Six Per Cent Method	105
53. Finding the Time between Two Dates	106
54. Promissory Notes	108
55. To Find the Principal, Rate, or Time	110

CHAPTER VII

MEASUREMENT OF LINES

56. Line Segments	113
57. Finding the Sum and the Difference of Line Segments	115
58. Accuracy in Measuring	117
59. Drawing to Scale	120
60. Representing Numbers by Lines	122
61. Some Definitions	125
62. The Relation between the Circumference and the Diameter of a Circle	127

CHAPTER VIII

ANGLES

63. Meaning of Angle	132
64. Kinds of Angles	134
65. The Sum and the Difference of Angles	136
66. Complementary and Supplementary Angles	136
67. Measuring Angles	137
68. Using the Protractor	139
69. Circular and Angular Measure	141
70. How Longitude Is Measured	142
71. Standard Time	143

CHAPTER IX

TRIANGLES. CONSTRUCTIONS WITH RULER AND
COMPASSES

	PAGE
72. Definitions	151
73. Classification of Triangles	151
74. Base and Altitude of a Triangle	152
75. The Use of Ruler and Compasses	153
76. To Construct a Triangle with Three Given Sides	153
77. At a Given Point in a Given Line to Construct an Angle Equal to a Given Angle	154
78. To Construct a Triangle When Given Two Sides and Their Included Angle	155
79. To Construct a Triangle When Given Two Angles and Their Included Side	156
80. Facts to Be Learned	158
81. The Perpendicular Bisector of a Line	159
82. To Construct the Perpendicular Bisector of a Given Line Segment	159
83. To Erect a Perpendicular to a Line at a Point on the Line	161
84. To Erect a Perpendicular to a Given Line from a Given External Point	161
85. The Distance from a Point to a Line	162
86. To Bisect a Given Angle	162

CHAPTER X

PARALLEL LINES, QUADRILATERALS, AND REGULAR
POLYGONS

87. Parallel Lines	165
88. To Construct a Line Parallel to a Given Line through a Given External Point	166
89. Quadrilaterals	167
90. Kinds of Parallelograms	168
91. Base, Altitude, Diagonal	168
92. To Construct a Parallelogram	169
93. Principles concerning Quadrilaterals	170
