P R E F A C E .

THESE notes are published with a view of enabling Practitioners to diagnose, and correctly estimate the value of, the phenomena indicating the state of a patient's refraction. They are intended to furnish a basis for observation: and it is hoped that they will make evident the necessity which exists for *personally working out* a large number of refraction cases in order to acquire anything like proficiency in prescribing correct glasses.

To those friends who have aided me by their suggestions I would take this opportunity of expressing my best thanks.

Welbeck Street, W.
March, 1881.

TABLE OF CONTENTS.

	PAGE
INTRODUCTION	I
CHAPTER I.	
Old and New Systems of Lenses—Table of Comparison . . .	3
CHAPTER II.	
Action of Rays and Lenses	6
CHAPTER III.	
Definitions	8
CHAPTER IV.	
Accommodation	12
CHAPTER V.	
Conditions necessary for clear perception of a line	14
CHAPTER VI.	
Description of Test-types—Mode of use	16
CHAPTER VII.	
Indications afforded by use of Test-types	18
CHAPTER VIII.	
Indications afforded by Mirror alone—Movements of Image of disc in Emmetropia, Myopia, Hypermetropia and Astigmatism —Explanation of same	20

	PAGE
CHAPTER IX.	
Indications afforded by Mirror alone—Movements of Image of Light and shadow on Retina—Keratascopy (Retinoscopy)	27
CHAPTER X.	
Indications afforded by Mirror and Lens—Change in size of Image of disc in Emmetropia, Myopia, Hypermetropia and Astigma- tism—Explanation	35
CHAPTER XI.	
Estimation of Refraction by Ophthalmoscope—Condition of Ob- server's own Refraction—Tabular view of different States of Refraction	40
CHAPTER XII.	
Test-types and glasses—Prescribing Spectacles in Hypermetropia —Myopia—Astigmatism—Presbyopia—Table of glasses for Presbyopia—Aphakia	45
CHAPTER XIII.	
Action of Atropine—Calculation for same—Conclusion	54

REFRACTION OF THE EYE.

INTRODUCTION.

THESE pages are intended for beginners, and for those, such as Physicians or general Practitioners, who, systematically using the Ophthalmoscope in their investigation of disease, wish to avail themselves of the information thereby afforded regarding the patient's refraction, the errors of which they must be able to detect in order to make due allowance for them. If the patient can assist by his answers, many valuable indications are afforded by the use of test-types and glasses, a description of which, with the information derived therefrom, is therefore introduced.

Some hints are given as to glasses required in the more *ordinary* cases, but for the various diseases which accompany and complicate many of the errors of refraction and modify the ordering of spectacles, the reader is referred to the works already published on this subject, to the study of which these notes are intended to prepare the way.

So essential is the remembrance of some of the facts hereafter mentioned, that, at the risk of tautology, they have been kept constantly before the reader. The plan which has been found so useful in other branches of medical study has been adopted here, viz. to work out from the
