PREFACE

THIS volume gives the substance of lectures delivered at Brown University in connection with the celebration of the 150th anniversary of the university's foundation. I have amplified the lectures, and have also annotated them with some freedom.

The reader will bear in mind that I deal by no means with all the relations between economics and psychology, but with some only. Much is being done along the whole border line between these fields of knowledge, and I touch only one part of it, — that which has to do with the phenomena of instinct.

F. W. TAUSSIG.
