RAILWAY ENGINEERING;

OR,

FIELD WORK

PREPARATORY TO THE CONSTRUCTION OF RAILWAYS.

CONTAINING

THE ORIGINAL AND MOST APPROVED METHODS OF LAYING OUT RAILWAY CURVES, AND OF SETTING OUT THE WIDTHS OF THE CUTTINGS AND EMBANKMENTS, ETC.;

A

General Table

FOR THE

CALCULATION OF EARTHWORKS

OF

RAILWAY CANALS, ETC.

WITH TWO AUXILIARY TABLES;

ALSO,

TUNNELLING, AND INVESTIGATION OF THE FORMULA FOR THE SUPER-ELEVATION OF THE EXTERIOR RAIL IN CURVES.

- TO

PETER BARLOW, ESQ.

F.R.S., M. INST. C. E., ETC. ETC.

LATE PROFESSOR OF MATHEMATICS IN THE ROYAL MILITARY
ACADEMY, WOOLWICH,
AND ONE OF THE COMMISSIONERS OF THE RAILWAY GAUGES,

AS

A MARK OF ESTEEM

FOR HIS DISINTERESTED KINDNESS,

AND

IN ADMIRATION OF HIS TALENTS

AS AN ORIGINAL MATHEMATICIAN AND PHILOSOPHER,

This Clock is Dedicated,

WITH THE HONOUR OF HIS PERMISSION,

BY HIS MOST DEVOTED SERVANT,

THE AUTHOR.

P R E F A C E.

THE matter contained in the following pages, with the exception of a few additions and improvements, was drawn up about twenty-five years ago for private use; its publication, at the present time, having been delayed at least two years, for reasons, which it will be unnecessary here to state.

The chief part of SECTION I, On the Different Methods of laying out Railway Curves on the ground, was communicated to my friend the late professor Leybourn, of the R. M. College, Sandhurst, in 1824, and afterwards published by him in the "Gentleman's Diary;" these Methods being adapted to all cases that can occur in practice, as well as to the different degrees of scientific skill possessed by surveyors and engineers. The Constructions, Formula, and Methods of laying out Compound, Serpentine, and Deviation Curves, with Tables of Offsets for Railway Curves, were also placed in his hands; but his death prevented their publication.

As these Methods of laying out Railway Curves, especially two of them, have been generally adopted in practice, from the commencement of the Stockton and Darlington Railway to the present time, and as several other gentlemen, during the last two or three years, have published on the same subject, most of whom have given either all or part of my methods, I think it right to claim the Invention of them. See Remarks on the Invention of the Methods of laying out Railway Curves, p. 29.

The gentlemen that have published on this subject are, Law, Castle, Rankine, and Hill (see page 31). I have lately seen similar publications by Heald, Brodie, Gardner, May, and others. Almost all these authors give their formulae and rules for laying out curves, without investigation; some of them have given an unnecessary profusion of formulae, which involve the subject they pretend to explain, in such a degree of obscurity as must be very perplexing to students, and repulsive to those engineers who have been accustomed to use my methods, in which I anticipated, above twenty years ago, all that has since been done by these authors, at least as far as real practical utility is concerned.

In SECTION II, I have given Methods of setting out the widths of ground for Railway Cuttings, on horizontal, laterally sloping, and uneven ground, with original Formulae connected therewith; superseding, in most cases, the unscientific methods of approximation given for the same purpose used by many engineers. This Section concludes with methods of calculating the quantity of land required for projected and intended Railways.

In SECTION III, I have treated extensively on finding the Con-

tents of Railway Cuttings, both for preliminary Estimates from the depths, and for actual Cuttings from Sectional Areas, by means of a General and two Auxiliary Tables, on one folding sheet at the end of the work. — *The Method here given of finding the Contents of Cuttings from Sectional Areas is, as far as I know, the only one mathematically correct, yet published, having been prepared for private use, many years ago.*

The authors who have published Tables on this subject are Sir John McNeill, Mr. Bidder, Mr. Bashforth, Messrs. Sibley and Rutherford, Mr. Huntingdon, Mr. Law, and others; some of whose Tables are voluminous, and most of them well adapted for finding the Contents of Cuttings for preliminary Estimates; but none of them are accompanied with directions for finding the Contents from Sectional Areas, which is the most important part of the use of such Tables, except Mr. Bashforth's: *but his method of applying them is erroneous.* See pages 41 and 54. This Section contains Investigations of the Methods of constructing the Tables, and of using them for finding the Contents of Cuttings; and concludes with investigating and pointing out the errors of Mr. Bashforth and others.

In SECTION IV. I have given Methods of setting out the Earthwork of Tunnels, with a Table of the Dimensions of several existing Tunnels.

In SECTION V. I have given the Investigation and Application of the celebrated Formula for the Superelevation of the Exterior Rail in Railway Curves, which is, I believe, due to *Pambour*.

The matter contained in this Work is drawn up in a manner which, I trust, will be easily understood by any surveyor or engineer; Examples, wrought out at length, being given in every case, the mathematical Investigations of the Problems, &c. being kept separate from the practical parts of the Work, the whole of which, except a few trifling alterations, form part of a System of Railway Engineering, which I added to the ninth edition of Nesbit's Surveying, lately published.

In conclusion, I can truly say that the whole of the matter contained in this small volume, with some few trifling exceptions, was originally drawn up by me; the most essential parts of which have either been published or communicated to my friends for periods varying from ten to twenty-five years: no author, on the subjects here treated of, having preceded me, whose results appeared to be of a character adapted to this work, excepting one of *Pambour's* as already noticed; and a small part of the investigation of the rules for finding the contents of earthworks which has been given, as is well known, by various authors.

T. BAKER.

CONTENTS.

SECTION I.—RAILWAY CURVES.

	Page
On the use of curves in railways in general	7
On the different methods of laying out railway curves	8
On mechanical methods of laying out railway curves, or curve-rulers	8
The limit of the radii of railway curves	9
PROB. 1. CASE I. To determine the radius of a railway curve mechanically	9
CASE II. To determine the radius of a railway curve geometrically	10
III. To find the radius of the curve when the map is inaccurate	11
IV. To find the radius when the tangents cannot be prolonged to meet	11
PROB. 2. To lay out a railway curve by the common method	12
3. To lay out a railway curve by offsets from its tangents	15
CASE I. When the length of the curve is less than $\frac{1}{2}$ of its radius	15
II. When the curve is any required length	16
III. When the length of the curve exceeds the limit adopted in CASE I, but is considered too short to be divided into two parts as in CASE II.	17
PROB. 4. To lay out the curve by two theodolites, where water, swamps, quarries, and other obstructions prevent the use of the chain	18
5. To lay out the curve by offsets from its chord or chords, &c.	20
Definition of the compound curve	21
PROB. 6. To find the several radii of the compound curve, &c.	22
Definition of the serpentine or S curve	23
PROB. 7. (1.) When one radius and its tangential point are given, to find the other radius and tangential point of the serpentine curve geometrically	23
(2.) When the tangential points and one of the radii of the serpentine curve are given, to find the other radius geometrically	24
PROB. 8. (1.) When the two portions of the serpentine curve have the same radius, to determine that radius geometrically, the tangential points and their distance being given	25
(2.) To find the common radius of the serpentine curve by calculation	25
PROB. 9. To make a given deviation from a straight portion of a line of railway by means of three curves	26
Remarks on laying out the curves in the four last problems	27
Examples showing how expensive severance of property, &c., is unnecessarily made by improperly laying out railway curves	28
Remarks on the invention of the methods of laying out railway curves	29

SECTION II.—CUTTING AND EMBANKING RAILWAYS.

On setting out the width of ground for a railway	32
PROB. 1. To set out the width, when the surface of the ground is laterally on the same level as the intended railway	32
