DISEASES

OF

THE UTERUS.

LECTURES ON THE FUNCTIONS AND DISEASES OF THE WOMB,

BY CHARLES WALLER, M.D.,

Lecturer on Midwifery and the Diseases of Women and Children, Bartholomew's Hospital.

LECTURES ON DISEASES OF THE UTERUS AND ITS APPENDAGES,

BY (M.) LISFRANC,

Surgeon to La Pitié Hospital, etc., etc., etc.

CLINICAL LECTURES ON DISEASES OF THE PUERPERAL STATE,

BY J. T. INGLEBY,

Fellow of the Royal College of Physicians, Edinburgh.

CINCINNATI, OHIO—J. A. JAMES.

1842.

P R E F A C E .

THE American editor of the three series of LECTURES ON THE DISEASES OF THE UTERUS, included in the present volume, has confined himself to the task of selection and arrangement, under a belief that the copiousness of detail, both in pathology and treatment, might well dispense with annotations by even a more experienced hand. The only qualifying remark made in addition to the text, is that on amputation of the *cervix uteri* as performed by M. Lisfranc, whose too confident assertions of success in this operation are calculated to mislead the young and sanguine practitioner.

These Lectures are all taken from the *London Lancet*. To the American reader they are now, for the first time accessible.

CONTENTS

TO WALLER ON THE FUNCTIONS AND DISEASES OF THE WOMB.

LECTURE I.

General Observations and mode of arrangement. — Function of the unimpregnated womb. — Age at which menstruation commences, various. — Symptoms attending its appearance. — Time of duration. — Period of cessation. — Use of the flow. — Discharge peculiar to the human female. — Secreted by the uterus. — Supposed to possess noxious qualities. — Lunar influence. — Enlargement of womb at the period of menstruation P. 9

LECTURE II.

DISORDERS OF THE MENSTRUAL FUNCTION.

Disorders of the menstrual function. — Amenorrhœa, or chlorosis; its varieties. — *Emansio mensium*. — Organic defects. — Imperfect formation. — Closure of the orifice of the vagina, or uterus, remedied by operation. — Case in which a female never menstruated. — Symptoms of chlorosis. — Treatment of chlorosis 15

LECTURE III.

Obstruction of the menstrual flow accompanied with plethora; symptoms and treatment. — Emmenagogues improper. — Suppression; its varieties. — Sudden suppression; symptoms and treatment. — Vicarious discharges of blood. — Suppression frequently the result of ill health, and treatment required. — Suppression natural under certain circumstances. — Menorrhagia; varieties. — Active and passive menorrhagia 21

LECTURE IV.

Active menorrhagia; symptoms and treatment. — Passive menorrhagia; symptoms and treatment. — Case where the plug was used. — Dr. Haighton's plan. — Transfusion of blood. — Menorrhagia repeatedly attacks women. — Sometimes results from diseased liver, or from actual disease of womb 27

LECTURE V.

Dysmenorrhœa, with membranous formation; symptoms. — Dr. Denman's opinion that the disease necessarily produces sterility incorrect. — Pregnancy sometimes the means of cure; danger of confounding the symptoms with miscarriage. — Opinion to be given under such circumstances. — Treatment of the disease. — Opinion of Dr. M'Intosh. — Dysmenorrhœa without membrane; symptoms and treatment. — Cessation of menstruation. — Period various. — Considered by women as a critical time. — Erroneous opinions of old authors; treatment required; sometimes mistaken for pregnancy. — Means of diagnosis. — Sterility; its causes; various opinions, generally the result of constitutional defect 33

LECTURE VI.

DISEASES OF THE UNIMPREGNATED WOMB.

Diseases of the womb. — General observations. — Inflammation of the substance of the womb; symptoms; the practitioner seldom consulted sufficiently early. — Causes of hysteritis; treatment depends upon the state of the general system; enlargement sometimes the consequence of this inflammation. — Vaginal examination. — Inflammation of the os and cervix uteri; symptoms; examination necessary; treatment; occasional consequences of the disease. — Thickening of the os uteri; treatment. — Ulceration of the os uteri. — Formation of abscesses around the os uteri; treatment 40

LECTURE VII.

Malignant ulcer of the womb — generally occurs after menstruation has ceased — Symptoms in the early and in the more advanced stages of the disease. — Peculiarity of the pain; disease commences in the membrane covering the os tinæ; differs in its appearance from carcinoma; substance of the uterus in general not affected. — Treatment, palliative, except at the commencement, before ulceration has taken place; treatment when ulceration has occurred; various other ulcerations of the os uteri. — Cauliflower excrescence; symptoms. — Sir Charles Clarke's opinion as to its cause. — Prognosis always unfavourable regarding life; favourable and unfavourable symptoms as to duration of life; may be mistaken for placental presentation p. 48

LECTURE VIII.

Treatment of cauliflower excrescence of the os uteri. — Necessity of commencing early; treatment at its commencement; bloodletting; application of cold; straight syringe to be preferred; quietude necessary; recapitulation. — Treatment in the more advanced stage; symptoms attending that stage; indications; remedies required, local and constitutional; ligature; means of distinguishing this excrescence from placental presentation; treatment when occurring at the time of labour. — Carcinoma uteri, not always begins in the cervix. — Definition of scirrhus; symptoms; danger of confounding the symptoms with those of dyspepsia; character of the pain. — Ulcerated carcinoma; symptoms; does not of necessity prevent impregnation 55

LECTURE IX.

Treatment of carcinoma uteri; might be prevented from developing itself if treatment were begun sufficiently early; cases illustrating this point. — Treatment of scirrhus uteri; age at which it generally commences; necessity for careful investigation; antiphlogistic remedies required at the onset; local applications; regimen; variety of medicines recommended at different times; vegetable diet and distilled water. — Ulcerated carcinoma: progress of the ulceration; symptoms; treatment merely palliative; local applications; opium; appearances noticed on dissection; extirpation of the womb proposed by Dr. Blondell; opinion respecting it; Sir Astley Cooper's advice; fungoid tumour of the uterus; character of the disease; symptoms and progress; ulceration may take place in various situations; treatment, palliative. — Neuralgia of uterus: character of the pain; increased during the menstrual period; illustrative case; general appearance of patients labouring under uterine neuralgia; os uteri sometimes swollen; state of the vagina; leucorrhœa sometimes present 62

LECTURE X.

Treatment of neuralgia of the uterus; necessity for the recumbent position, even where the disease is mild; treatment required when the os uteri is tumid. — General circulation in most cases at first but slightly affected; medicines required; opium, belladonna, tonics, nourishment. — Care required not to move about too early; hip-bath. — Tuberculated uterus: fleshy tubercle of Hunter; character of the disease; varieties of uterine tubercle; symptoms and progress; effects upon neighbouring parts; hæmorrhage an occasional symptom. — Danger of forming an erroneous diagnosis; ill effects of pressure; necessity for prompt measures. — Treatment of uterine tubercle; in the early stages; may be stayed in its progress; illustrative cases. — Tympanitis uteri. 70

LECTURE XI.

Polypus of the womb: polypus not confined to the uterus; situations of polypus uteri various; texture; colour; generally distinct growths; vascular; insensible; difference in size; may be combined with other diseases; no assignable cause for its production; its growth slow; sometimes spontaneously cured

Symptoms of polypus: leucorrhœa; hemorrhage; fœtid discharge; bladder and rectum sometimes affected; dyspeptic symptoms; Sir Charles Clarke's case; examination per vaginam; diagnosis easy; tumour resembling polypus; when small polypus does not obstruct conception, prognosis favourable. Treatment: various plans proposed for its removal; ligature; description of instrument required; mode of using it; avoid the uterus; different periods of time elapse before ligature comes away.—After-treatment; polypus of vagina. Moles: various substances called mole; Vogel's definition; two distinct forms of moles; symptoms; treatment.—Calculus of womb; symptoms; treatment; worms P. 76

LECTURE XII.

Hydatids of the uterus; description of; sometimes many, at others single; size various; colour generally white; opinions respecting their formation; seldom occur in unmarried persons; generally combined with utero-gestation; symptoms; how to be distinguished from advancing pregnancy; mechanical effects; diagnosis; after a time the uterus begins to act; practitioner often not called until this period.—Treatment: their growth cannot be prevented; nothing required in early stage.—Treatment when hemorrhage supervenes: endeavour to excite uterine action; application of cold; ergot of rye not in all cases to be depended upon; discretion required respecting stimulants; plug; external pressure; introduction of the hand; after treatment.—Single hydatid of the uterus; hydrometra of the ancients; symptoms neither dangerous nor alarming; illustrative case; little or no treatment required.—Concluding remarks 84

CONTENTS

TO LISFRANC ON DISEASES OF THE UTERUS AND ITS APPENDAGES.

LECTURE I.

ON THE TOUCHER, AND THE APPLICATION OF THE SPECULUM.
Common mode of examining the genital organs in women; points of importance unnoticed by authors; the lecturer's mode; the whole vagina should be examined, and especially the neck and body of the uterus; varieties in the position and condition of the neck; capacity of the vagina; the toucher by the rectum; variations in the body of the uterus; surgical anatomy of the parts; mode of introducing the speculum; examination of the neck through the speculum; circumstances which contraindicate its use 93

LECTURE II.

THE INFLUENCE EXERCISED ON THE SPECIAL DISEASES OF THE UTERUS BY ITS FUNCTIONAL DERANGEMENTS.

Total and temporary absence of menstruation in women; causes which produce this, and its treatment; error of supposing the uterus always free from morbid alterations before menstruation; period of the first menstruation; cautions for that period; capriciousness of this function; menstruation attended by great pain; sudden arrest and diminution of the menses; excessive menstruation; cessation of the causes in advanced years; affections of the uterus not most common at this period; excessive venereal desire 100

LECTURE III.

ON UTERINE HEMORRHAGE, OR METRORRHAGIA: LEUCORRHEA AND HYSTERIA.

Flooding unconnected with pregnancy; its connexion with menstruation; danger of arresting it when of long standing; uterine hemorrhage not an

essential disease, but the result of organic change of the womb; specific causes; where it is curable; where the case is dangerous to some other viscus; where it is incurable; on plugging the vagina. — Of leucorrhœa, or the whites; its sources and causes not dropsy of the uterus; venereal character; treatment. Injections into the uterus; hysteria, its connexion with the uterus; treatment p. 107

LECTURE IV.

GENERAL REMARKS ON THE SYMPTOMS AND TREATMENT OF DISEASES OF THE UTERUS.

Seeming health during incurable disease of the uterus; cautions on this account; precursory symptoms; palpable disease — death. — Series of general remedies applicable to uterine diseases; viz., baths, repose, injections, lotions to the vulva; cataplasms to the vagina, irrigations, affusions, lavements, narcotics, bloodletting 113

LECTURE V.

TREATMENT OF DISEASES OF THE UTERUS (*Continued*). — SUB-INFLAMMATION, HYPERTROPHY, SIMPLE WHITE ENGORGEMENT AND HYPERTROPHY OF THE UTERUS.

Cupping, pessaries, and medicated drinks. — Sub-inflammation without enlargement, simple hypertrophy, prolapsus, and occult cancer of the uterus; simple white engorgement and scirrhous tumour. — Is scirrhous curable? 123

LECTURE VI.

ENGORGEMENTS, TUMOURS, AND CANCERS.

Engorgements of the uterus; peculiar tumour of; uterine polypi; ulcerations of the womb, scrofulous and simple; fungi of the cervix uteri; cancerous vegetations 127

LECTURE VII.

AMPUTATION OF THE CERVIX UTERI.

Of the neck of the uterus; general considerations on the operation; indications for and against it; the surgical anatomy of the parts; the lecturer's method of performing the operation; accidents which may arise from it; means proper for healing the wound 140

CONTENTS

TO INGLEBY ON DISEASES OF THE PUERPERAL STATE.

LECTURE I.

INTERNAL UTERINE HEMORRHAGE.

Forms of placental apoplexy; illustrative case; mode of attack; local and constitutional symptoms; condition of the membranes and liquor amnii; historical references; farther illustrative cases; indications of treatment; objections against rupturing the membranes; dangers of the plug 149

LECTURE II.

LACERATION OF THE WOMB.

Illustrative case; causes of laceration of the uterus; fibrous tumour; experience of Mr. Collins; *post-mortem* appearances; gastrotomy in laceration of the uterus; illustrative case; various opinions on this operation 157

LECTURE III.

POLYPUS OF THE WOMB.

History of the case; *post mortem* appearances; hemorrhage as a symptom; appearances of the tumour; successful employment of the ligature . p. 168

LECTURE IV.

CHOREA DURING PREGNANCY.

General remarks on chorea; causes of chorea; history of cases; treatment . 171

LECTURE V.

PLACENTAR PRESENTATION.

Clinical history of the case; observations illustrative of the opinions delivered; origin of the hemorrhage in this species of presentation; necessity of immediate delivery; dangers attending placental presentations; rules for the conduct of the practitioner 176

LECTURE VI.

OVARIAN DROPSY.

History of the case; *post-mortem* appearances; symptoms of ovarian dropsy; diagnostic characters; signs derived from percussion; rules respecting tapping; pressure of diseased ovarium on the rectum; remote effects of the disease; spontaneous rupture of the cysts; illustrative cases 180

LECTURE VII.

UTERINE HYDATIDS.

Watery discharges of the uterus; definition of hydatids; characters of hydatid vesicles; their nature and origin; specimen of a single hydatid; history of uterine hydatids; illustrative cases; treatment of the disease 188

LECTURE VIII.

ON DISEASES OF THE BLADDER IN FEMALES, IN CONNEXION WITH THE UNIMPREGNATED STATE AND WITH DELIVERY.

Fibrous tumour of the pelvis; effects of tumours on the bladder; necessity of examining the uterus; illustrative case; polypoid diseases; neuralgia from fibrous tumour; morbid states of the bladder occasioned by difficult labour; treatment required in such cases; illustrative example 197

LECTURE IX.

ON THE DISEASE TERMED IRRITABLE UTERUS.

History of the case; nature of irritability of the uterus; opinions of Dr. Gooch; tumours of the pelvis; distension of the uterus; illustrative cases; diagnosis of irritable uterus; treatment of this affection 204

LECTURE X.

ON FIBROUS TUMOURS OF THE UTERUS.

Symptoms of fibrous tumour; origin of these tumours; Dr. Beatty's case of fibrous tumours; changes taking place in the uterus; discharges accompanying fibrous tumours; changes in the fibrous tumour 210

LECTURE XI.

FIBROUS TUMOURS OF THE UTERUS (*Continued*).

Influence of the absorbents on fibrous tumours; earthy deposits in fibrous tumours; effect of loss of blood on fibrous tumours; discharges accompanying fibrous tumours; treatment of fibrous tumours; instances of cure; fibrous tumours producing *retroversio uteri*; sloughing of a fibrous tumour; removal of fibrous tumours 218
