PREFACE.

THE object of the following treatise is to present simply and concisely the fundamental problems of the Calculus, their solution, and more common applications.

Since variables are its characteristic quantities, the first fundamental problem of the Calculus is, *To find the ratio of the rates of change of related variables.* To enable the learner most clearly to comprehend this problem, the author has employed the conception of rates, which affords finite differentials and the simplest demonstration of many principles. The problem of Differentiation having been clearly presented, a general method of its solution is obtained by the use of limits. This order of development avoids the use of the indeterminate form $\frac{0}{0}$, and secures all the advantages of the differential notation. Many principles are proved, both by the method of rates and that of limits, and thus each is made to throw light upon the other.

In a final chapter, the method of infinitesimals is briefly presented; its underlying principles having been previously established.

The chapter on Differentiation is followed by one on Integration; and in each, as throughout the work, there

are numerous practical problems in Geometry and Mechanics, which serve to exhibit the power and use of the science, and to excite and keep alive the interest of the student.

In writing this treatise, the works of the best American, English, and French authors have been consulted; and from these sources the most of the examples and problems have been obtained.

The author is indebted to Professors J. E. OLIVER and J. McMAHON of Cornell University, and Professor O. ROOT, Jr., of Hamilton College, for valuable suggestions; and to Messrs. J. S. CUSHING & Co. for the typographical excellence of the book.

J. M. TAYLOR.

HAMILTON, N. Y.,

CONTENTS.

CHAPTER I.

INTRODUCTION.

Section.	Page.
1. Definition of <i>variable</i> and <i>constant</i>	1
2. Definition of <i>function</i> and <i>independent variable</i>	1
3. Classification of functions	2
4. Definition of <i>continuous variable</i> and <i>continuous function</i>	2
5. Definition of the <i>limit</i> of a variable	3
6. <i>Limits</i> of equal variables	3
7. Limit of the <i>product</i> of a constant and a variable	4
8. Limit of the <i>product</i> of two or more variables	4
9. Limit of the <i>quotient</i> of two variables	4
10. Limit of the <i>sum</i> of two or more variables	4
11. Definition of <i>uniform</i> change	5
12. Definition of <i>increment</i>	5
13. Definition of <i>differential</i>	5
14. Illustrations of differentials	6
15. Definition of <i>inclination</i> , <i>slope</i> , and <i>tangent</i>	7
16. Geometric signification of $\frac{dy}{dx}$	7
17. Limit of the ratio of the increments of y and x	8

CHAPTER II.

DIFFERENTIATION.

18. Definition of <i>differentiation</i> . Differentiation of ax^2	10
--	----

Algebraic Functions.

19. Differential of the <i>product</i> of a constant and variable	10
20. Differential of a <i>constant</i>	11
21. Differential of the <i>sum</i> of two or more variables	11

Section.	Page.
22. Differential of the <i>product</i> of two variables	12
23. Differential of the product of several variables	13
24. Differential of a fraction	14
25. Differential of a variable with a <i>constant exponent</i>	14
26. General symbol for the differential of $f(x)$. Examples	15
27. Definition of an <i>increasing</i> and a <i>decreasing</i> function	17
28. Definition of <i>derivative</i>	17
29. <i>Measure</i> of rate of change	18
30. Signification of $\frac{dy}{dx}$	18
31. Signification of $f'(x)$ or $\frac{dy}{dx}$	18
32. Limit of the ratio of Δy to Δx . Applications	19
33. Definition of <i>velocity</i> and <i>acceleration</i> . Examples	23
<i>Logarithmic and Exponential Functions.</i>	
34. Differential of a <i>logarithmic function</i>	24
35. The greater the base, the smaller the modulus	25
36. Napierian system	25
37. Differential of e^x	26
38. Differential of y^x	26
39. Logarithmic differentiation. Examples	26
<i>Trigonometric Functions.</i>	
40. Definition of the <i>rad</i> of angular measure	29
41. Differential of $\sin x$ and $\cos x$	29
42. Differential of $\tan x$	30
43. Differential of $\cot x$	30
44. Differential of $\sec x$	30
45. Differential of $\operatorname{cosec} x$	31
46. Differential of $\operatorname{vers} x$	31
47. Differential of $\operatorname{covers} x$	31
48. Limit of the ratio of an arc to its chord	31
49. Differentiation of $\sin x$ by the method of limits. Examples	32
<i>Anti-Trigonometric Functions.</i>	
50. Differential of $\sin^{-1}x$	35
51. Differential of $\cos^{-1}x$	35
52. Differential of $\tan^{-1}x$	35
53. Differential of $\cot^{-1}x$	36
54. Differential of $\sec^{-1}x$	36

CONTENTS.

vii

Section.	Page.
55. Differential of $\operatorname{cosec}^{-1}x$	36
56. Differential of $\operatorname{vers}^{-1}x$	36
57. Differential of $\operatorname{covers}^{-1}x$. Examples	36
Miscellaneous examples	36

CHAPTER III.

INTEGRATION.

58. Definition of <i>integral</i> and <i>integration</i> . Sign of integration . . .	43
59. Elementary principles	43
60. Fundamental formulas	44
61. Statement of formulas 1 and 2. Examples	46
62. Auxiliary formulas. Examples	50
63. Trigonometric differentials. Examples	55
64. <i>Definite</i> integrals. Examples	58

Applications to Geometry and Mechanics.

65. Rectification of curves. Examples	60
66. Areas of plane curves. Examples	61
67. Graphical representation of any integral	63
68. Areas of surfaces of revolution. Examples	63
69. Volumes of solids of revolution. Examples	65
70. Fundamental formulas of mechanics. Examples	66
1. Formulas for uniformly accelerated motion.	
2. Motion down an inclined plane.	
3. Motion down a chord of a vertical circle.	
4. Values of v and s when a varies directly as t .	
5. Geometrical representation of the <i>time, velocity, distance,</i> <i>and acceleration.</i>	
6. Path of a projectile.	
7. Path, velocity, and acceleration of a body whose velocity in each of two directions is given.	

CHAPTER IV.

SUCCESSIVE DIFFERENTIATION.

71. Successive derivatives	71
72. Signification of $f''(x)$, $f'''(x)$, $f^{(n)}(x)$. Examples	71
73. Successive differentials	73
74. Relations between successive differentials and derivatives. Examples	73
